Any lighting products suggested by Lumascope for installation are recommendations only - regardless of the circumstances of the recommendation. The responsibility for any compliance to required lighting levels or energy standards and codes rests solely with a certified lighting engineer or lighting practitioner appointed by others.

All Lumascope luminaires are intended for use as architectural accent lighting and their use as part of public or workplace lighting designs requires certification and design by others to ensure compliance to the relevant lighting standards. Under no circumstances does Lumascope accept responsibility for such certification.

Ingress Protection Rating

Degrees of protection provided against the intrusion of solid objects, dust, accidental contact and water.

Impact Rating

Degrees of protection by enclosures for electrical equipment against external mechanical impact.

Drive-over Capable

Luminaire can be driven over.

Maximum Static Load

The maximum load in kilograms that the inground luminaire can withstand.

HumanTouch™

This technology ensures the glass temperature is maintained below 65 °C.

OptiClear™

A glass with very high optical purity and load strength.

GripGlass™

Textured treatment of OptiClear™ glass for inground luminaires to minimise the risk of slipping.

PureOptics™

Advanced reflectors which provide maximum efficiency over a long service life

MicroAntiLeach™

Sealing process eliminating moisture ingress through the cable.

ElectroPolishPlus™

Proprietary system providing exceptional resistance to tea-staining and corrosion of stainless steel.

Mono Colour

Product is available with single colour LED source.

RGB

Product is available with RGB colour LED source.

What's New!

This catalogue now includes:

- Updated visual product index
- New Interior Downlight section
- New LS375LED Star III Underwater luminaire
- New LS363LED Inground uplight luminaire
- New LS861LED Wall mount luminaire

Interior Downlights

The new Lumascope Interior downlights are a range of specification grade fixed downlights manufactured from ultra efficient LED technology. These luminaires are designed to maintain a 70% average lumen output at 50,000 hours and includes Chip On Board LED for precision light distribution and light weight liquid forging heatsink adapted for heat management. Available in various colour temperatures.

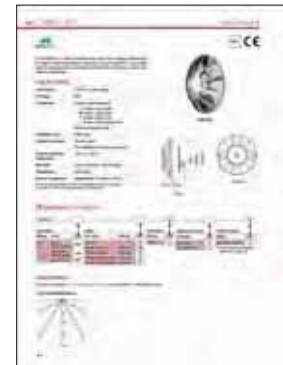

LS15024
(see page 212 for details)

Wall Mount Luminaire

The LS861LED is a wall mounted luminaire with linear styling complementary to modern architectural designs.

LS861LED
(see page 138 for details)

Underwater Fountain Light

The LS375LED is a compact, surface mounted fountain light designed for high performance applications.

LS375LED Star III
(see page 121 for details)

Inground Uplight LED Luminaire

The LS363LED is a compact inground luminaire allowing placement in a variety of accessible areas.

LS363LED
(see page 21 for details)

humantouch™
TOTAL TEMPERATURE REDUCTION TECHNOLOGY

The **HumanTouch™** system not only guarantees the optimal performance of Lumascope luminaires, but it also reduces external glass temperatures to human friendly levels for public spaces where safety is the priority.

HumanTouch™ ensures the temperature of all the internal components are actively maintained well below their maximum safe operating temperatures. Should abnormal environmental circumstances threaten to overheat the luminaire, our dual protection system simply turns the luminaire off.

HumanTouch™ is yet another innovative concept designed to increase the quality of your Lumascope product. Look for the logo below on the Lumascope products that can contain the advanced HumanTouch™ technology.

This diagram demonstrates the concept of HumanTouch™ in inground luminaires equipped with PureOptics™ reflector.

Glass Temperatures For Surface Mounted Luminaires

HumanTouch™ temperatures for surface mounted luminaires are measured in a controlled laboratory environment at an ambient temperature of 25 °C (77 °F), in still air, and mounted to a highly insular surface. The inclusion of any other accessory may vary surface temperatures from those listed. Consult factory for details.

Glass Temperatures For Inground Luminaires - Quick Reference

HumanTouch™ glass temperatures for inground luminaires are measured in a controlled laboratory environment at an ambient temperature of 25 °C (77 °F), in still air, and installed in a highly insular substrate. The inclusion of any other accessory may vary glass temperatures from those listed. Consult factory for details.

All Lumascope LED products are **HumanTouch™** compliant

INCAND-Air³⁰

RGBWA LED LUMINAIRE

LED Mind Incandescent Soul

Lumascape's INCAND-Air 30 is a high power LED based downlight system.

Although originally developed for retrofitting into the mounting hardware of existing downlights, the INCAND-Air 30 is also offered as a complete luminaire for new installations.

Available in Single Colour, RGB, or RGBWA, the INCAND-Air 30 is capable of producing beautiful high CRI whites of any CCT and accurately replicates the colour temperature shift that is characteristic of halogen lamps when dimmed.

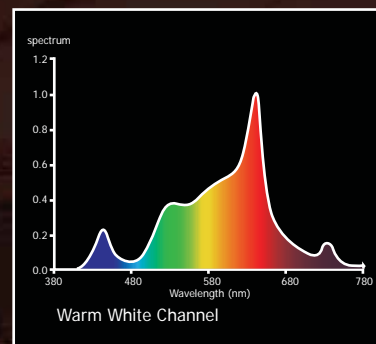

With RGBWA, excellent whites and vivid colours can be easily achieved. INCAND-Air 30 achieves an outstanding, totally smooth dimming performance, from 100% brightness to black-out without any flicker, or step off.

This dimming capability is accomplished through the use of an ultra high resolution interpolative dimming method.

For incandescent quality lighting powered by sustainable technology, contact Lumascape for the latest innovations in LED technology and bespoke lighting solutions.

silent passive cooling

Why is IP68 for inground luminaires important?

Water ingress is the most common complaint with inground luminaires. With water ingress comes internal corrosion, unsightly droplets under the glass and eventual electrical failure. Even IP67 luminaires, which are claimed to be suitable for exterior use can have frequent water ingress problems.

A common oversight is that normal use of inground luminaires can include periods of temporary submersion (heavy rains, low lying areas, irrigation, snow melt, etc). The diagrams (right) show how water can enter an inground luminaire that is not IP68.

That's why all Lumascope inground luminaires are IP68. We ensure that even during submersion, no water can enter. In fact, our LS343 is independently certified to a depth of 11 m, well beyond common use, ensuring trouble-free operation over the life of the luminaire.

But IP68 is not just about the lid seal, its also about the cable entry. That is why we invented the **MicroAntiLeach™** cable entry seal.

Please read on below for more information on Lumascope's **MicroAntiLeach™** technology.

LUMASCOPE INGROUND PRODUCTS ARE IP68

MicroAntiLeach™ 100% Sealed, factory installed wire entries

A common point for moisture ingress in inground luminaires is through the wire entry: The same pressures that effect the lid seal also effect the wire entry point.

That's why every Lumascope inground features **MicroAntiLeach™**, a factory installed, 100% watertight wire entry that blocks moisture from entry to the luminaire. Even if water gets into the stranded copper, there is no way to get through into the housing. This unique, compact design has a high pressure resistance, enduring a 30 psi pressure test before it can

be used in a Lumascope luminaire. This is one of many critical engineering considerations Lumascope builds into every inground luminaire, ensuring a long service life.

Whilst **MicroAntiLeach™** was developed for inground luminaires, this feature can also be found on underwater, and other selected Lumascope luminaires. Specify with confidence, knowing your project is protected from the inside out with Lumascope **MicroAntiLeach™**. Look for the **MicroAntiLeach™** logo on the catalogue page.

GET CONNECTED

With Lumascape IP68 rated wire nut connectors

LS6134-1
Wire nut connector

- Pre-filled with 100% silicone sealant that protects against moisture and corrosion
- Easy installation process saves time and improves productivity
- Thicker thermoplastic shell for extreme durability in harsh environments
- Live-action square-wire spring for secure and long-lasting connections
- Connected and Protected in one easy, timesaving process
- Designed to exceed the rigorous test standards of UL 486D
- Minimum cable size 2 x 1 mm² underground cable
- Maximum cable size 3 x 3.3 mm² underground cable

Dealing with a tough job? Make it easier by using Lumascape IP68 rated connectors.

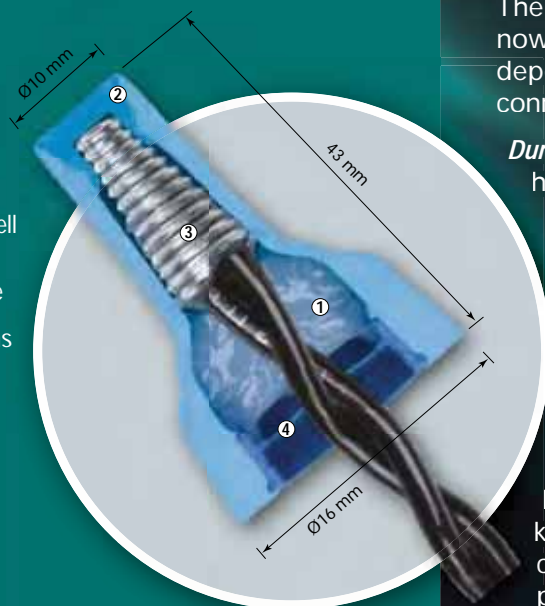

The leading brand in twist-on wire connectors now makes any job easier by using tough and dependable Weather Proof and Underground wire connectors.

Durability: These harsh-duty IP68 rated connectors have been designed specifically to handle wire connections exposed to damp/wet and direct burial/below grade conditions.

Performance: Each connector is pre-filled with a long-lasting 100% silicone sealant that protects your electrical connections from the most severe environments.

Cost Savings: They save you time and money too. With other connectors you have to use heatshrink resin packs, multi-step corrosion kits or caulk and tape to protect your electrical connections from moisture and corrosion. Our pre-filled connectors eliminate these costly time-consuming steps and give you maximum protection with just a few simple twists.

- 1 100% silicone sealant
- 2 Thick thermoplastic shell for extreme durability
- 3 Live-action square-wire spring for secure and long-lasting connections
- 4 Fixed end cap secures sealant and protects connection

LED source

Lumascapc Head Office - Cleveland QLD, Australia
LS853LED inground uplight luminaire

The LS853LED is a full featured shallow depth inground luminaire. The LED luminaire features a built in driver, and measures only 180 mm deep (in direct burial format). The ability to aim the luminaire ensures the most efficient light delivery can be set according to the site conditions.

SPECIFICATIONS

LED Source	LED 14 W or 20 W ⁽¹⁾ <i>Integral driver</i> <input type="checkbox"/> White (4300 K typical) <input type="checkbox"/> Warm white (3000 K typical) <input type="checkbox"/> Blue (470 nm) LED 20 W ⁽¹⁾ <input type="checkbox"/> RGB
IP Rating	IP68
Construction	316 marine grade stainless steel
Installation Types	Direct burial <i>Landscapes, etc.</i> Mounting collar <i>Decks and grates</i> <i>(LS640)</i> Pre-installation blackout <i>Drive-over or other applications requiring pre-installation</i> <i>(LS6072-K - with single gland entry)</i> <i>(LS6052-K - single colour line voltage with IP68 connector)</i> <i>(LS6102-K - single colour low voltage with IP68 connector)</i>
Drive-over	With OptiClear™ lens and pre-installation blackout
Static Load Rating	4200 kg with OptiClear™ lens and pre-installation blackout
Impact Rating	IK10 with OptiClear™ lens
Standard Inclusions	Teflon coated cover screws MicroAntiLeach™ cable entry Thermal cutout Humidity absorbent desiccant
Ambient Operating Temperature	-20 °C to +50 °C
Warranty	10 year structural, 1 year electrical
Accessories <i>Order separately</i>	Refer to page 13 for direct burial Refer to page 15 for pre-installation
Photometrics	Refer to page 16
Glass Temperature	HumanTouch™ compliant ≤65 °C

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement

⁽¹⁾ Nominal power consumption only, actual power consumed may vary.

LS853LED Recessed Cover

LS853LED Round Flush Cover

LS853LED Pre-installation Round Flush Cover

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Not available for RGB option

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over applications.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

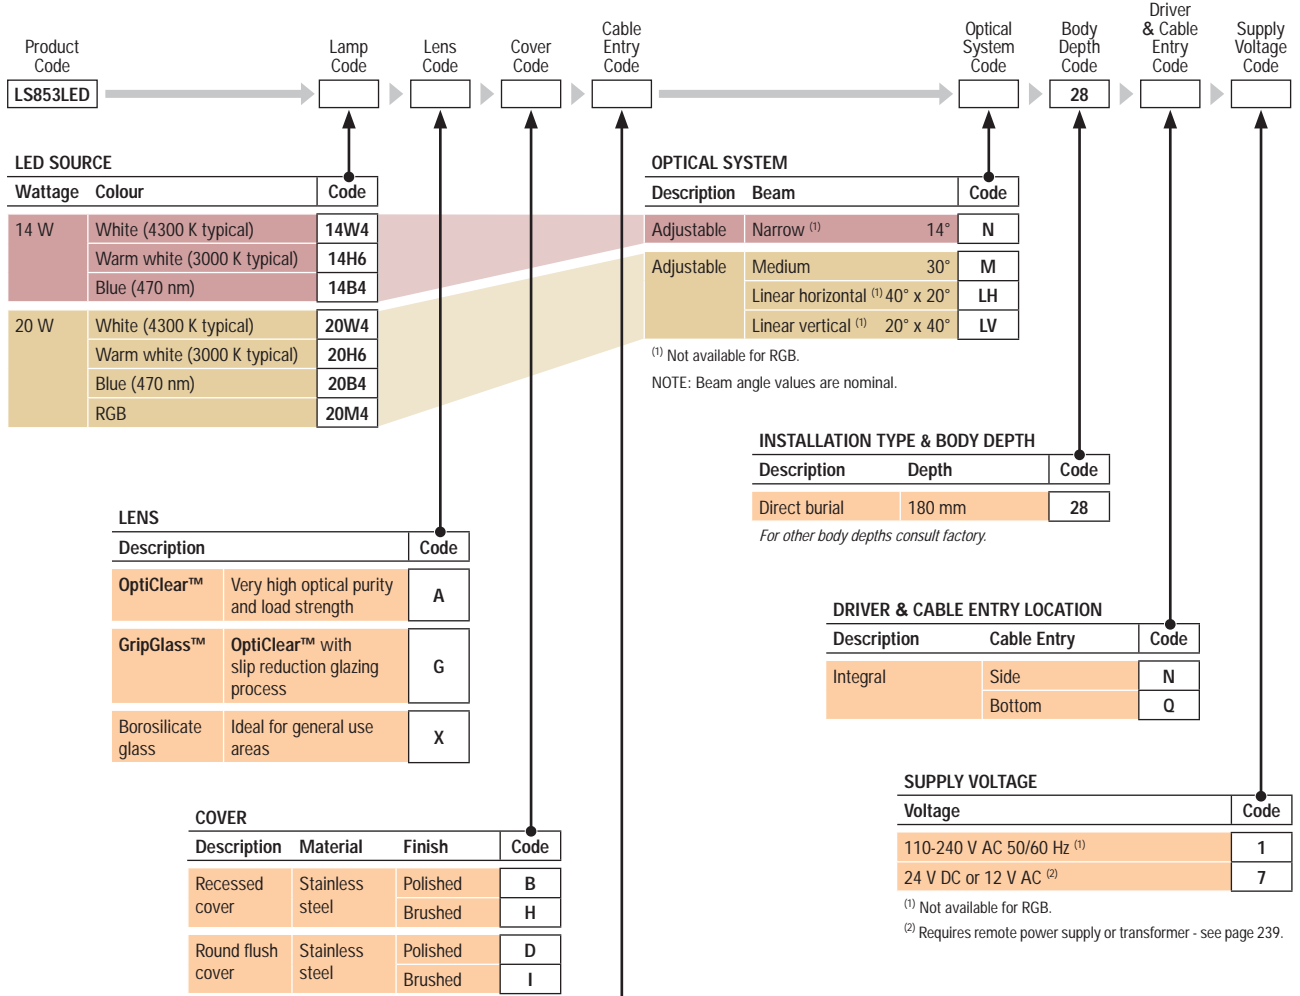

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS6052-K, LS6072-K or LS6102-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also allows for off-site maintenance, via the detachable

IP68 connector fitted on the luminaire housing (LS6072-K uses a single gland entry instead).

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS640 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with LS6052-K or LS6102-K without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box.

The LS640 mounting collar and the LS6072-K pre-installation kit have a single gland entry. *See page 12.*

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout & Mounting Collar

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, **OptiClear™** or **GripGlass™** must be used.

LS353LED shallow inground luminaire

The LS353LED ultra shallow inground luminaire is 124 mm deep and is specifically designed for applications where minimal depth is critical. The luminaire is suitable for use in high pedestrian traffic areas and can be used for drive-over applications. The shallow depth allows the housing to be integrated into suspended concrete slabs.

Tarrawarra Museum - Yarra Glen VIC, Australia
LS363 inground uplight luminaire

The LS363LED is a compact inground option, utilising 14 W or 20 W LED. **HumanTouch™** is an important feature of this series, allowing placement in accessible areas. Adjustability of the optics ensures light can be delivered where it is required.

SPECIFICATIONS

LS363LED Recessed Cover

LS363LED Round Flush Cover

LS363LED Pre-installation Round Flush Cover

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

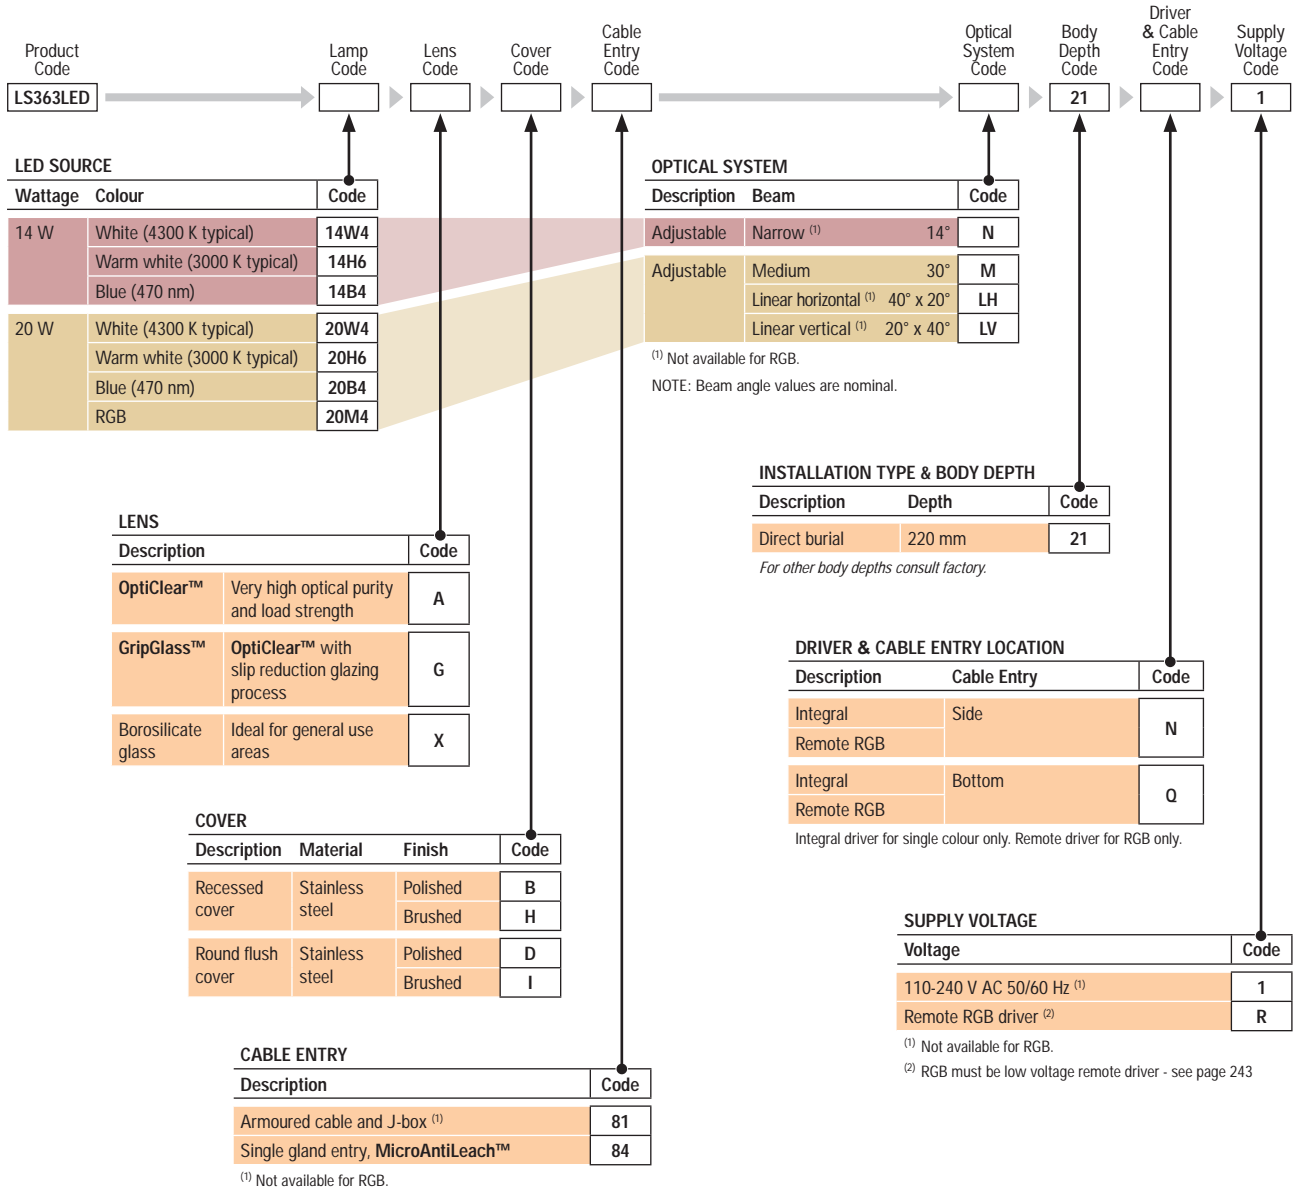

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

 CONFIGURE THIS PRODUCT >

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS644-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also allows for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS644 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with LS644-K, without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box. LS644 mounting collars must use a single gland entry.

The LS644 mounting collar has a single gland entry. *See page 22.*

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 1800 kg are properly supported. In order to achieve this drive-over rating, OptiClear™ or GripGlass™ must be used.

⁽¹⁾ Nominal power consumption only, actual power consumed may vary.

LS393LED Recessed Cover

LS393LED Round Flush Cover

LS393LED Pre-installation Round Flush Cover

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable MC & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Not available for RGB option

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

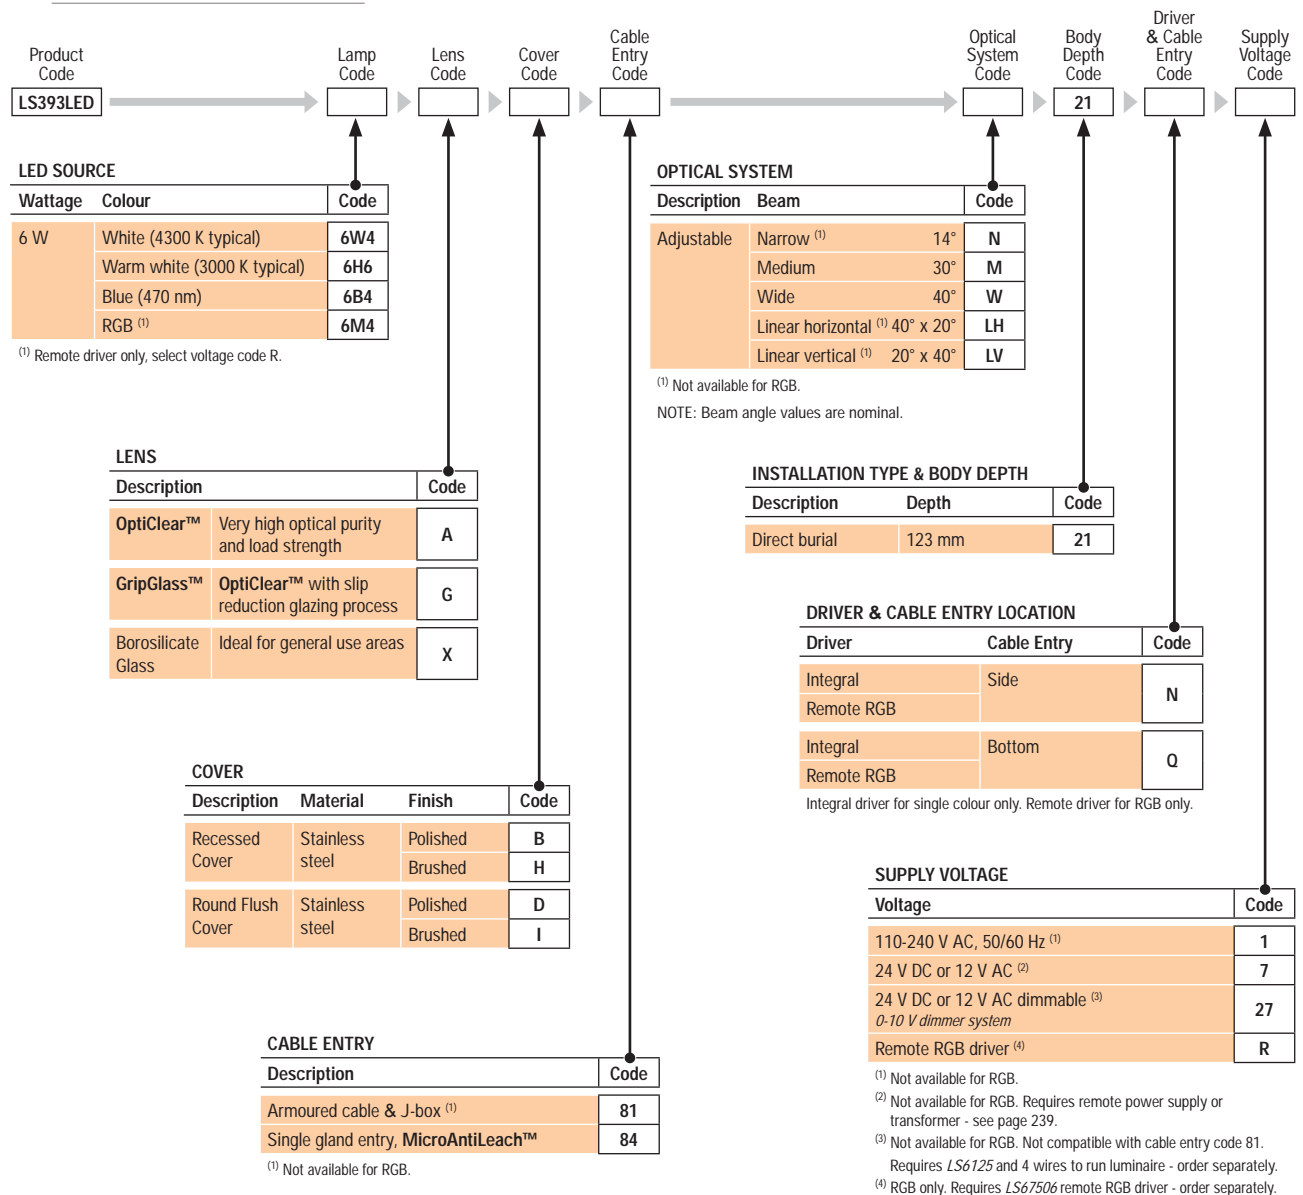

Round Flush Cover

- SS316: Polished
- SS316: Brushed

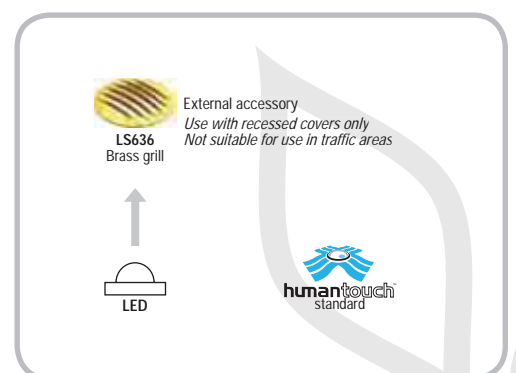

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

CONFIGURE THIS PRODUCT >

ACCESSORIES

Other accessory stacking options may be available - consult factory

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS647-K (for low voltage supply) or LS637-K (for line voltage supply) pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also allows

for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS647 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with LS647-K or LS637-K, without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box.

LS647 mounting collars must use a single gland entry. See page 28.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, OptiClear™ or GripGlass™ must be used.

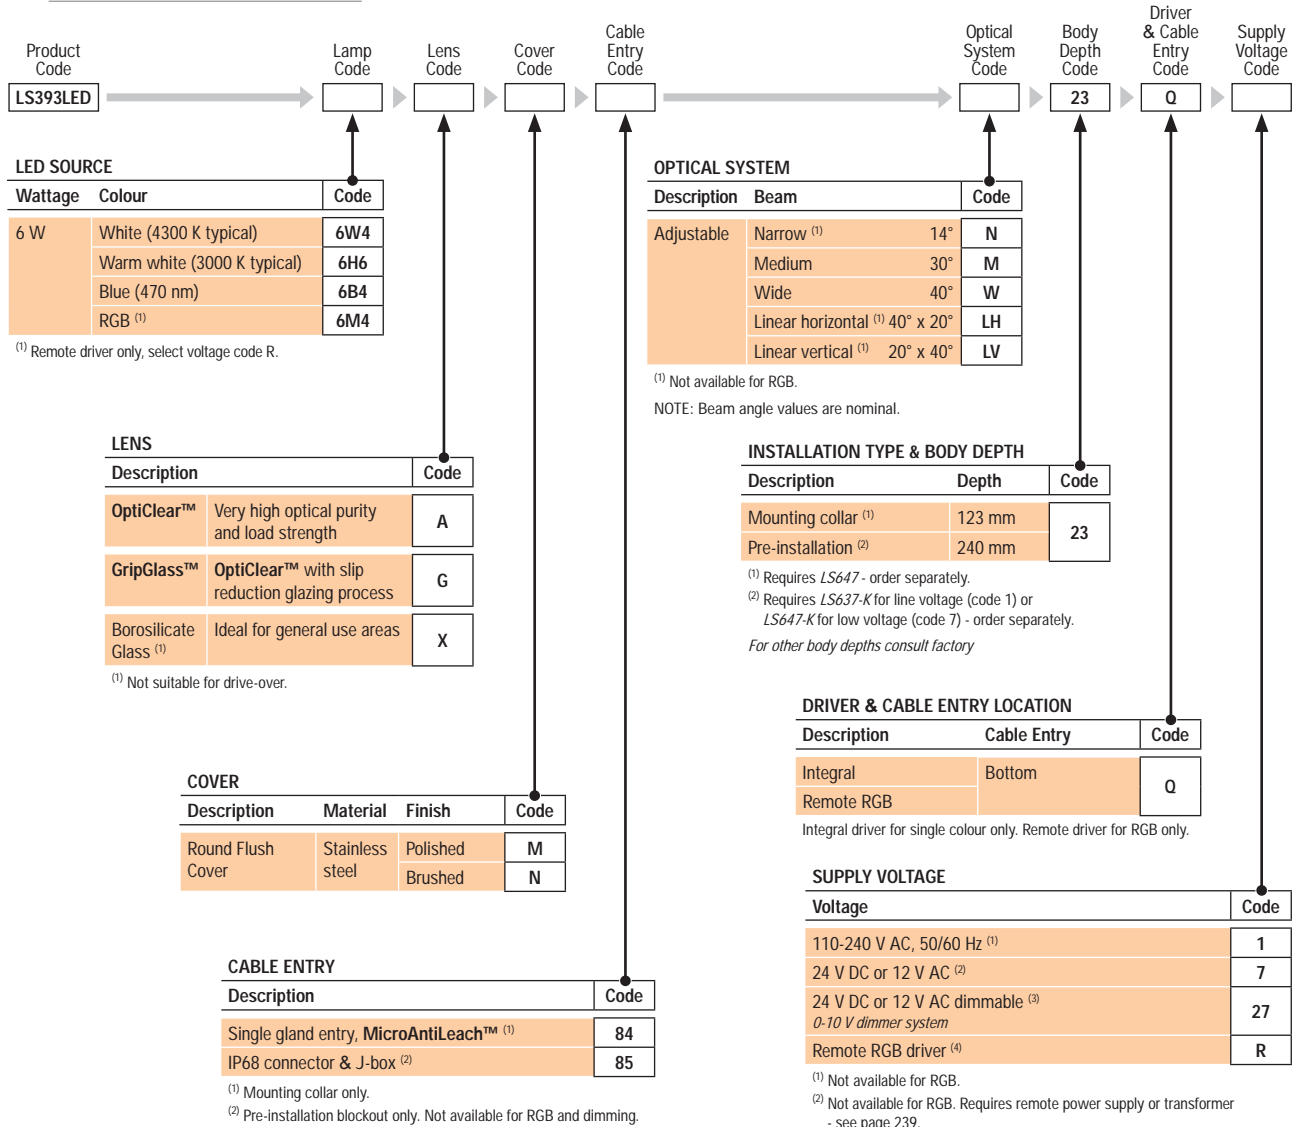

LS647-K pre-installation blockout

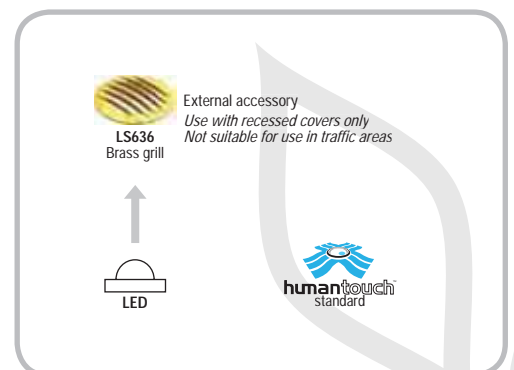

LS647 mounting collar

LS793LED inground uplight luminaire

The LS793LED is a compact inground luminaire featuring a small aperture. The compact size allows the luminaire to be integrated into more places without appearing to dominate the architecture or landscape. For a superior wall wash effect, a factory set lamp tilt option is available delivering more light onto the desired surface.

LS553LED inground uplight luminaire

The LS553LED is a rugged, side emitting marker light constructed of 316 marine grade stainless steel. This luminaire is ideal for pathways, pedestrian malls and other public spaces. Some models are also suitable for use in low speed traffic areas. The construction and technology used in this luminaire ensures a long service life.

The LS9401LED and LS9403LED are small but versatile luminaires. The LS9401LED is fitted with an installation sleeve which can be cut to fit, allowing for a wide variety of custom installations. The LS9403LED comes with a pre-installation niche ideal for pathways, entrances and other outdoor applications. Constructed from 316 marine grade stainless steel these luminaires come with Lumascape's proprietary **ElectroPolishPlus™** as standard on stainless steel finish.

Wynnum Shore - Wynnum QLD, Australia
LS343 inground uplight luminaire

The LS343 is a premium inground luminaire with outstanding performance. The housing is totally sealed and has a rating equivalent to submersion up to 10 m underwater. The glass surface is safe to touch when fitted with **HumanTouch™**. Re-lamping and re-sealing on site is simple and robust. The choice of lamps and accessories makes the LS343 suitable for most uplighting applications.

SPECIFICATIONS

Lamp Source	MH / HIT T6 (G12)	35 W, 70 W
	MH CDM-R111 (GX8.5)	35 W, 70 W
	MH PAR30 (E26 / E27 medium)	35 W, 70 W
	MH PAR38 (E26 / E27 medium)	70 W max
IP Rating	IP68	
Construction	316 marine grade stainless steel	
Installation Types	Direct burial <i>Landscapes, etc.</i>	
	Mounting collar <i>Decks and grates (LS640)</i>	
	Pre-installation blackout <i>Drive-over or other applications requiring pre-installation (LS640-K)</i>	
Drive-over	With OptiClear™ lens and pre-installation blackout (LS640-K)	
Static Load Rating	4200 kg with OptiClear™ lens and pre-installation blackout (LS640-K)	
Impact Rating	IK10 with OptiClear™ lens	
Standard Inclusions	Teflon coated cover screws	
	MicroAntiLeach™ cable entry	
	Thermal cutout	
	Humidity absorbent desiccant	
Ambient Operating Temperature	-20 °C to 40 °C	
Warranty	10 year structural, 1 year electrical

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in /loop out and flexibility of luminaire placement.

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass
 Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™
 OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass
 Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS640-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also

allows for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS640 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation & Mounting Collar

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with the LS640-K without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box.

LS640 mounting collars must use a single gland entry. See page 44.

Lens Options

OptiClear™ Glass
Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™
OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass
Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation & Mounting Collar

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, OptiClear™ or GripGlass™ must be used.

Cable Entry Option for Direct Burial

Armoured Cable & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass
 Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™
 OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass
 Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

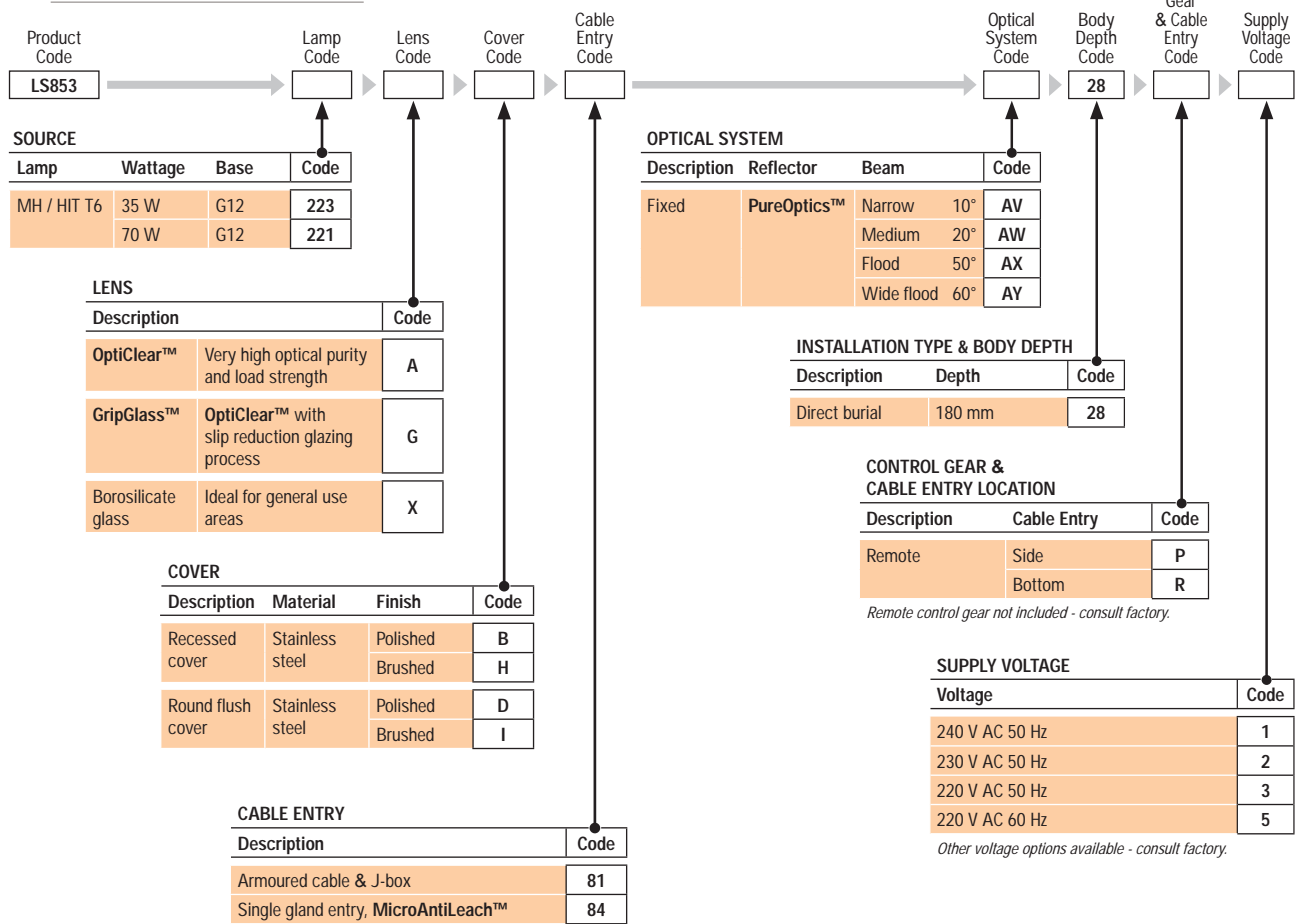

Round Flush Cover

- SS316: Polished
- SS316: Brushed

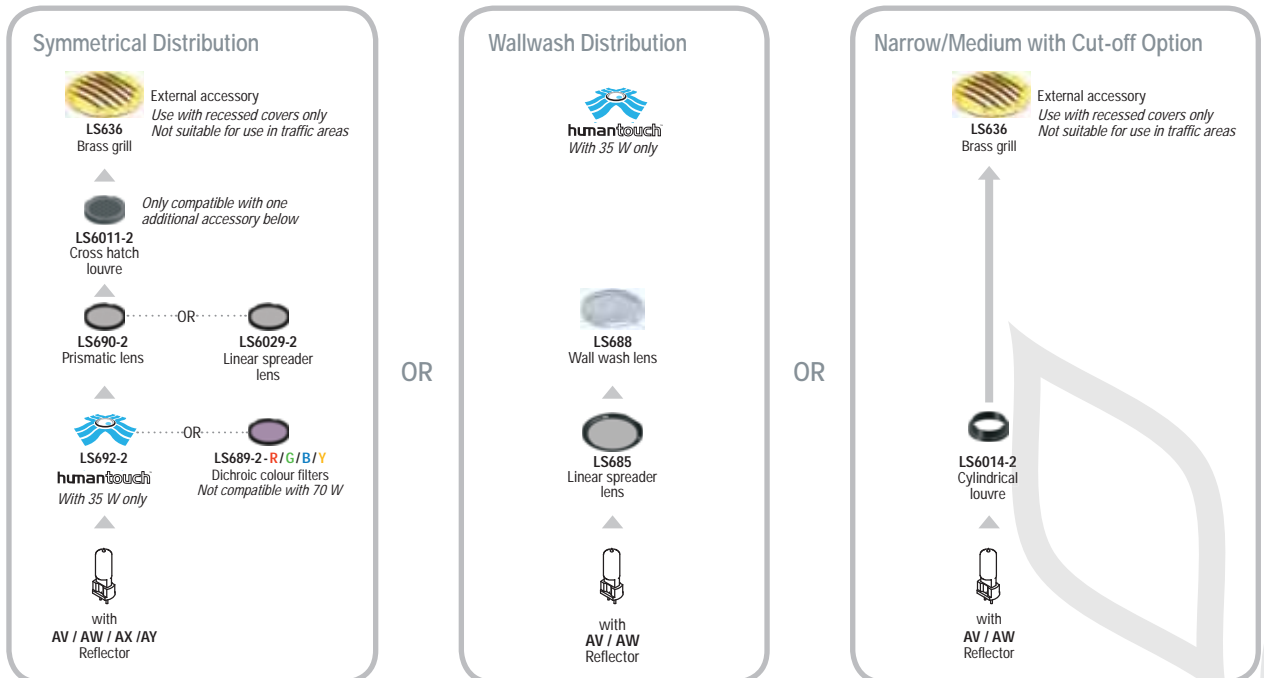

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS6058-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also

allows for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS640 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with the LS6058-K without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box.

LS640 mounting collars must use a single gland entry. See page 54.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout & Mounting Collar

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, OptiClear™ or GripGlass™ must be used.

LS6058-K pre-installation blockout

The LS793 is a compact inground luminaire featuring a small aperture. The compact size allows the luminaire to be integrated into more places without appearing to dominate the architecture or landscape. For a superior wall wash effect, a factory set lamp tilt option is available delivering more light onto the desired surface.

LED version see page 34.

The LS843 is a 20 W metal halide luminaire used for general uplighting applications. Available with wall wash lens, this luminaire is ideal for low level wall washing. Measuring only 180 mm deep in direct burial format, the LS843 is suitable for reduced depth applications where other integral gear luminaires cannot be used.

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass
 Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™
 OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass
 Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

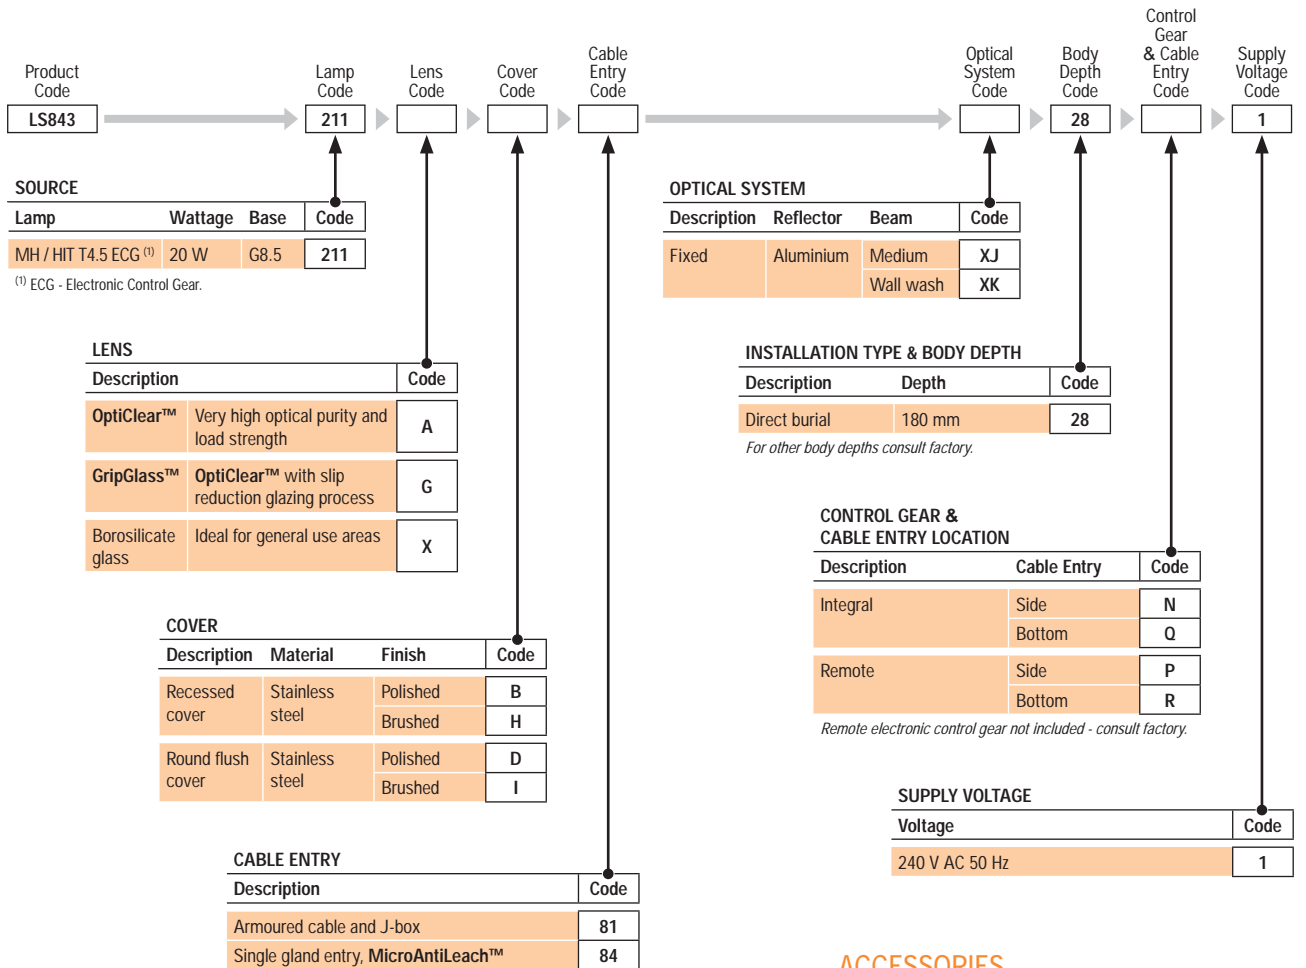

Round Flush Cover

- SS316: Polished
- SS316: Brushed

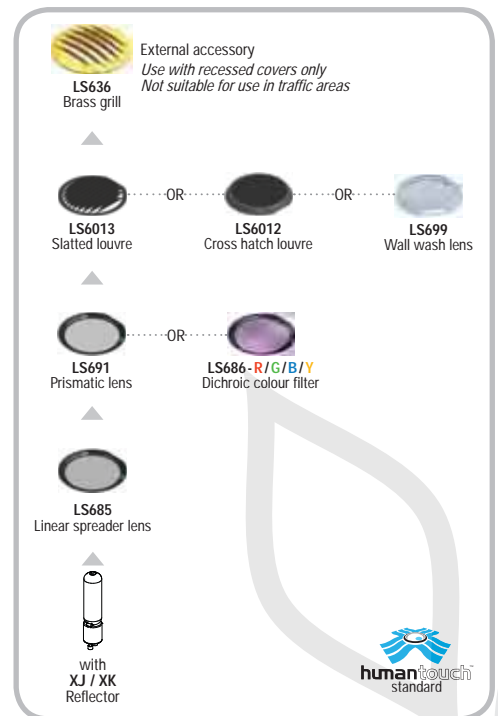

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS6052-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also

allows for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS640 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with LS6052-K, without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box. LS640 mounting collars must use a single gland entry. See page 62.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, OptiClear™ or GripGlass™ must be used.

The LS363 is an inground option now featuring 20 W metal halide technology. **HumanTouch™** is an important feature of this series, allowing placement in accessible areas. Adjustability of the reflector ensures light is delivered where it is required. The introduction of metal halide to this series now offers an attractive alternative to halogen in the same package size.

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 1800 kg are properly supported. In order to achieve this drive-over rating, **OptiClear™** or **GripGlass™** must be used.

The LS393 is a compact inground option, utilising 12 V Halogen MR16 lamps up to 35 W or 6 W LED. **HumanTouch™** is an important feature of this series, allowing placement in accessible areas. Adjustability of the lamp ensures light can be delivered where it is required. This model is also available with an 6 W LED array and integrated power supply, making it ideal for applications where line voltage supply is required.

LED version see page 27.

SPECIFICATIONS

Lamp Source	Halogen MR16 IRC (GU5.3)	35 W max

LS393 Pre-installation Round Flush Cover

XK
MR16 Reflector

WHY USE DIRECT BURIAL

Direct burial installation is ideal for landscaping areas or in locations where the depth is restricted. This type of installation also allows for maximum heat dissipation. The stainless steel construction of the luminaire performs flawlessly in alkaline and acidic soil types, as well as chemically fertilised landscapes.

Cable Entry Option for Direct Burial

Armoured Cable MC & Junction Box

Armoured cable 0.6 m provides protection against damage to cable between luminaire and 3 way junction box (included). Allows for loop in/loop out and flexibility of luminaire placement.

Single Gland Entry

MicroAntiLeach™ and 3 m flexible cable provide additional protection to luminaire against water ingress via cable.

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Direct Burial

Recessed Cover

- SS316: Polished
- SS316: Brushed

Use recessed cover for installation in soil, grass, pavers and other uneven surfaces where no cover overhang is desired.

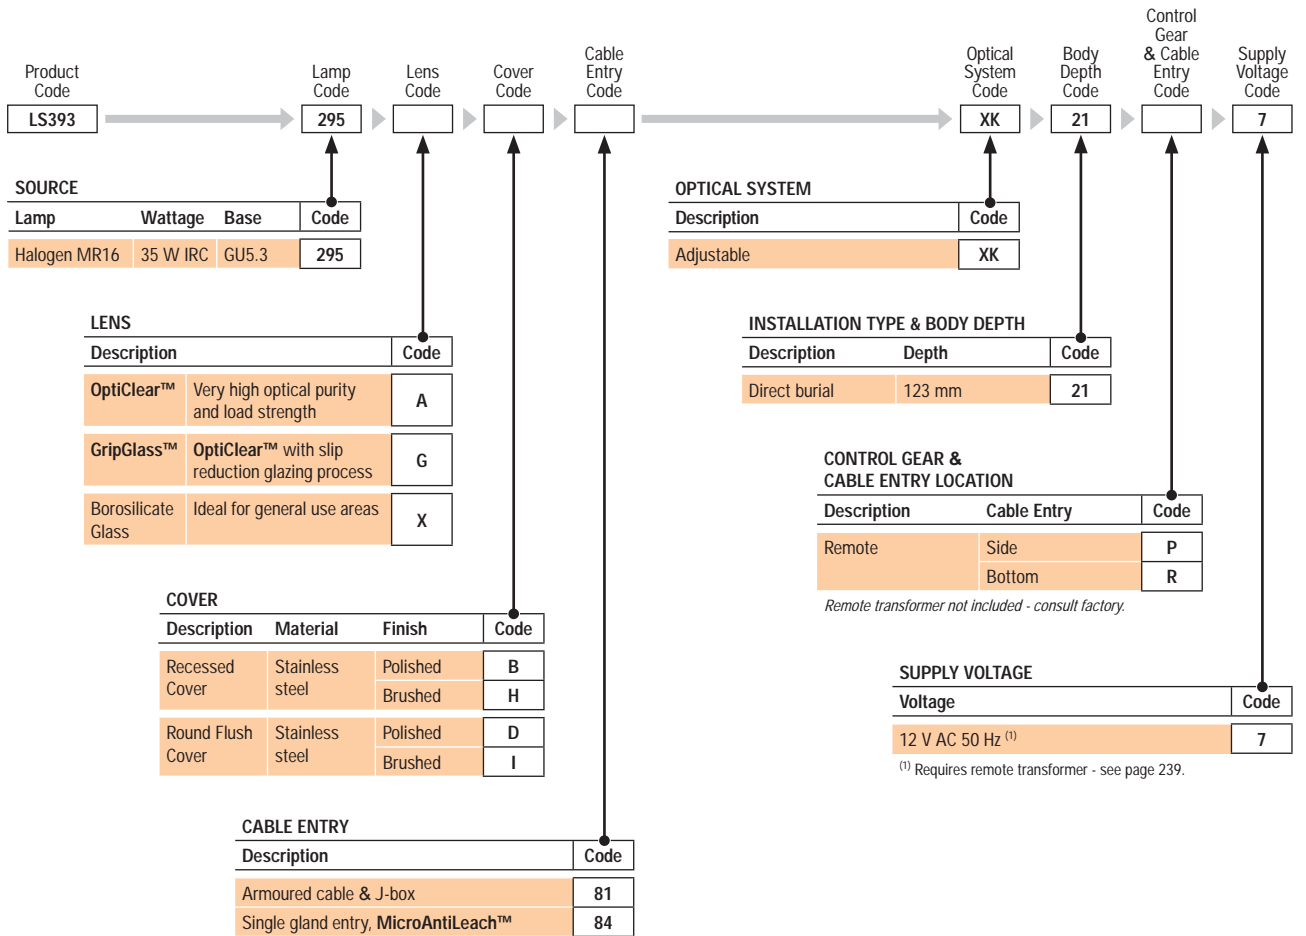

Round Flush Cover

- SS316: Polished
- SS316: Brushed

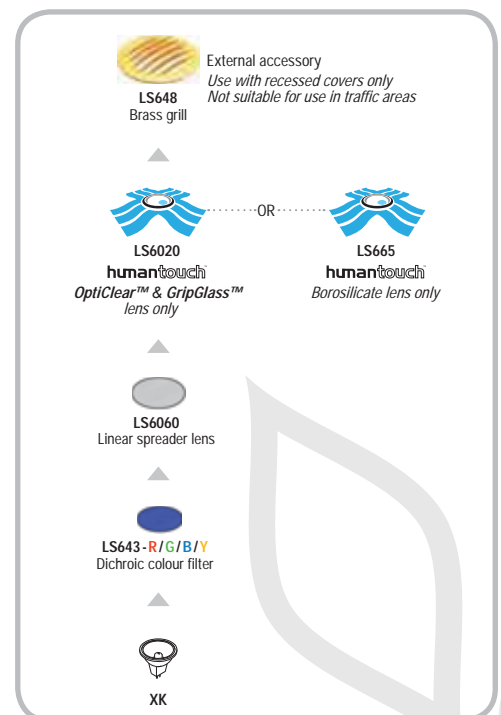

Use flush covers for installation in fine finished surfaces such as granite and marble. They can also be used in some suspended applications (decks, etc). The flush cover will conceal gaps between the luminaire and the surrounding surface.

ACCESSORIES

Other accessory stacking options may be available - consult factory

WHY USE PRE-INSTALLATION BLOCKOUT

This type of installation requires the LS647-K pre-installation kit (order separately) which acts as a blockout, and is intended for installation before the luminaire. This method ensures the luminaire itself is not damaged during concreting or other site works, and also allows for all wiring to be completed prior to luminaire placement. Pre-installation also

allows for off-site maintenance, via the detachable IP68 connector fitted on the luminaire housing.

The mating connector on the cable has a sealing cap which ensures water does not enter the cable before the installation is completed. Pre-installation is required for all drive-over applications.

WHY USE MOUNTING COLLARS

The LS647 mounting collar supports installation in decks and grates. They may also be used in hollow floors where there is appropriate ventilation.

Cable Entry Option for Pre-Installation Blockout

IP68 Connector & Junction Box

The luminaire is fitted with an IP68 connector, which attaches directly to the cable supplied with LS647-K without the use of any tools. The cable is 0.56 m in length, and is factory assembled with a 3 way junction box.

LS647 mounting collars must use a single gland entry. *See page 76.*

Lens Options

OptiClear™ Glass

Glass of very high optical purity and load strength. Suitable for drive-over applications.

GripGlass™

OptiClear™ glass with slip reduction glazing process. Suitable for drive-over applications.

Borosilicate Glass

Ideal for general use areas. Not suitable for drive-over application.

Cover Options for Pre-Installation Blockout

Round Flush Cover

- SS316: Polished
- SS316: Brushed

Flush covers for pre-installation use special seals and support bushes to ensure static loads up to 4200 kg are properly supported. In order to achieve this drive-over rating, **OptiClear™** or **GripGlass™** must be used.

OUR COMMITMENT

At Lumascope we believe that progress does not have to come at the cost of the environment. We strive to make the world a better place for future generations.

This attitude is reflected in everything we do – developing our products to a high standard and utilizing production methods that minimize our impact on the planet.

Lumascope believes that energy efficient lighting is the way of the future and accordingly, we invest heavily in the development of LED and HID based luminaires.

The use of high quality components and stringent quality control systems ensure that our luminaires have the longest service life possible – providing value for our customers and a commitment to...

THE FUTURE OF OUR ENVIRONMENT

- Research into energy efficient lighting technology
- Reduce power consumption through the use of efficient LED and low wattage lamp sources
- Wherever possible, products are manufactured from materials that can be recycled
- Easy to maintain, quality products that have a long service life
- Sound production techniques that conserve natural resources
- Equipment that is compliant with appropriate environmental standards

Redlands Performing Arts Centre - Cleveland, QLD Australia
LS471 Centria Wall Mount Up / Down

The LS471 is the up / down column lighting version of the Centria series. It also performs well for illuminating large wall expanses. Reflectors with different beam angles can be fitted to each side. Integral electronic control gear is a standard feature of LS471. Choices of lamps, beam angles, light and glare control accessories are available.

LED version see page 96.

SPECIFICATIONS

Lamp Source	MH / HIT T4.5 (G8.5)	2 x 20 W
IP Rating	IP66 / IP67	
Construction	Powder coated aluminium ■ Black ■ Silver Custom powder coat colours available.	
Installation Type	Wall mount	
Standard Inclusion	Electronic control gear	
Ambient Operating Temperature	-20 °C to +50 °C	
Warranty	2 year structural, 1 year electrical	
Accessories <i>Order separately</i>	LS6065 Linear spreader lens LS6066 Prismatic lens LS6067 Concentric louvre LS6064-R/G/B/Y Dichroic filters

Underwater

LED source

The LS9405LED has been specifically engineered for underwater use in pools and other water features. Several beam angles are available, ranging from narrow to wide. Constructed from 316 marine grade stainless steel the LS9405LED is built to last.

SPECIFICATIONS

LED Source	LED 2 W ⁽¹⁾ <input type="checkbox"/> White (4300 K typical) <input type="checkbox"/> Warm white (3000 K typical) <input checked="" type="checkbox"/> Blue (470 nm) Availability of other colours on request. Minimum order quantities may apply.
Control Signal	PWM Optional for 24 V DC and 12 V AC versions
IP Rating	IP68
Submersion Depth	8 m
Construction	316 marine grade stainless steel bezel
Installation Type	Pre-installation concrete blockout niche Supplied as standard
Standard Inclusions	Integral driver with field intensity setting (page 242) OptiClear™ glass MicroAntiLeach™ cable entry 8 m cable
Dimmable	Using LS6125 0-10 V dimming NOTE: 4 wires circuit required to be run to luminaire
Ambient Operating Temperature	5 °C to 40 °C
Warranty	5 year structural, 3 year LED and driver
Accessories	LS6125 0-10 V dimmer system LS6122 Wall plate dimmer
Photometrics	Refer to page 41

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement.

⁽¹⁾ Nominal power consumption using a DC power supply. Actual power consumed may vary. Power supply not included.

LS9405LED Vedita

Pre-installation Concrete Blockout Niche

CONFIGURE THIS PRODUCT >

⁽¹⁾ Requires 4 wires to run luminaire and LS6125 - order separately. ⁽¹⁾ Not applicable with flood beam.

⁽¹⁾ Linear with wall wash filter creates a linear horizontal beam.
 NOTE: Beam angle values are nominal.

The LS333ANS-2LED is a swimming pool light and one of Lumascope's most popular luminaires, constructed entirely of 316 marine grade stainless steel. It has a special alignment feature to ensure the beam of light is perpendicular to the installation surface, even if the pre-installation blockout niche is not. This LED alternative to the halogen lamp option allows for the creative introduction of colour and improved energy efficiency.

The LS265LED is a high performance fountain light utilising LED technology. The durable Lumascape 316 marine grade stainless steel underwater luminaire and long life LED source are an ideal combination. The single colour version is designed to operate on standard 12 V AC magnetic transformers making the installation as simple as other low voltage underwater luminaires. The LS265LED has the added advantage of being supplied factory sealed, with no requirement to open the luminaire during installation. This luminaire can also operate in very shallow water.

Wall Mount

LED source

31 Queen Street - Melbourne VIC, Australia
LS931LED Lineo

This streamlined and versatile lighting solution can be applied to installations requiring long lengths of continuous lighting. Providing a stylish and elegant lighting ambience, the LS931LED is available in lengths up to 2 m in increments of 200 mm.

SPECIFICATIONS

LED Source	LED 2 W segments ⁽¹⁾ <input type="checkbox"/> White (5800 K typical) <input type="checkbox"/> Warm white (3000 K typical) <input type="checkbox"/> Blue (470 nm) LED 2.5 W segments ⁽¹⁾ <input type="checkbox"/> RGB <small>Availability of other colours on request. Minimum order quantities may apply.</small>
Control Signal	Available to suit 1-10 V input for dimming DALI and DMX compatible. Refer to page 245.
IP Rating	IP67
Construction	Anodised aluminium
Lens	UV stabilised clear acrylic
Mounting	Polymer quick clip-on mounting system
Cable Length	3 m standard Other lengths available on request.
Ambient Operating Temperature	-20 °C to 50 °C
Warranty	2 year structural, 12 month electrical
Accessories	Requires remote power supply. Refer to page 239.
Photometrics	Refer below

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement.

⁽¹⁾ Nominal power consumption using a DC power supply. Actual power consumed may vary. Power supply not included.

LS931LED Lineo

IMPORTANT NOTE:

To calculate total length of luminaire:

Lineo consists of multiples of 200 mm 'segments'.
 Total length = number of segments x 200 mm + 25 mm.
 e.g 5 x 200 mm + 25 mm = 1025 mm.

To calculate total power requirement:

Each Lineo consists of 200 mm 'segments', each 2 watts.
 Total wattage = number of segments x 2 watts.
 e.g 5 x 2 watts = 10 watts.
 Power supply capacity must be equal to, or larger than this number.

HOW TO SPECIFY...

- LED SOURCE**
Select preferred LED colour or RGB.
- SEGMENTS**
Select the number of segments you require. Please note that 10 is the maximum number of segments the LS931LED Lineo can have.

CONFIGURE THIS PRODUCT >

electropolish+™

THE PROCESS

Machining

Machining stainless steel disrupts the natural Chromium Oxide (Cr_2O_3) layer. Chromium Oxide gives stainless steel its superior corrosion resistance.

Pickling

After machining, some carbide deposits and other impurities are left over. The pickling process cleans the surface of all impurities.

Polishing

This process smooths the surface, so chlorides and other active particles cannot become lodged on the surface.

Passivation

This is the final stage in the process. Passivation reforms a layer of Cr_2O_3 of even thickness over the surface, for maximum corrosion resistance.

The LS762LED is a low voltage spike mount luminaire delivering light in a controlled manner, with a choice of one or two adjustable light heads to direct the light where needed. The proprietary heat shield is unique to Lumascape and draws heat away from the lamp, extending the lamp life. This model is ideal for illuminating low level plantings or objects of interest in a landscape.

The LS25022 is a wall wash downlight. Manufactured from ultra efficient LED technology this luminaire is designed to maintain a 70% average lumen output at 50,000 hours. Includes Chip On Board LED for precision light distribution and light weight liquid forging heatsink adapted for heat management. Available in various colour temperatures.

SPECIFICATIONS

LED Source	LED 15 W ⁽¹⁾ <input type="checkbox"/> White (4300 K typical) <input checked="" type="checkbox"/> Warm white (3000 K typical) <i>Other colours by request</i>
IP Rating	IP44
Construction	Die-cast aluminium
Reflector	■ Semi Matt
Installation Type	Surface ceiling mount
Standard Inclusions	Remote driver - Triac dimmable as standard 0-10 V dimming option available
Ambient Operating Temperature	-20 °C to +50 °C
Warranty	3 years
Photometrics	Go to www.lumascap.com.au ▶ Technical Data ▶ Photometric Files

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement.

⁽¹⁾ Nominal power consumption only, actual power consumed may vary.

WARNING! DO NOT cover downlight - Refer to installation requirements AS 5110

The LS35023 is a specification grade adjustable downlight. Manufactured from ultra efficient LED technology this luminaire is designed to maintain a 70% average lumen output at 50,000 hours. Includes Chip On Board LED for precision light distribution and light weight liquid forging heatsink adapted for heat management. Available in various colour temperatures.

SPECIFICATIONS

LED Source	LED 10 W ⁽¹⁾ <input type="checkbox"/> White (4300 K typical) <input type="checkbox"/> Warm white (3000 K typical) <i>Other colours by request</i>
IP Rating	IP44
Construction	Die-cast aluminium
Reflector	■ Semi Matt
Installation Type	Surface ceiling mount
Standard Inclusions	Remote driver - Triac dimmable as standard 0-10 V dimming option available
Ambient Operating Temperature	-20 °C to +50 °C
Warranty	3 years
Photometrics	Go to www.lumascap.com.au ▶ Technical Data ▶ Photometric Files

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement.

⁽¹⁾ Nominal power consumption only, actual power consumed may vary.

WARNING! DO NOT cover downlight - Refer to installation requirements AS 5110

The LS25025 is a specification grade adjustable downlight. Manufactured from ultra efficient LED technology this luminaire is designed to maintain a 70% average lumen output at 50,000 hours. Includes Chip On Board LED for precision light distribution and light weight liquid forging heatsink adapted for heat management. Available in various colour temperatures.

SPECIFICATIONS

LED Source	LED 34 W ⁽¹⁾ <input type="checkbox"/> White (4000 K typical) <input checked="" type="checkbox"/> Warm white (3000 K typical) <i>Other colours by request</i>
IP Rating	IP44
Construction	Die-cast aluminium
Reflector	■ Semi Matt
Installation Type	Surface ceiling mount
Standard Inclusions	Remote driver - Triac dimmable as standard 0-10 V dimming option available
Ambient Operating Temperature	-20 °C to +50 °C
Warranty	3 years
Photometrics	Go to www.lumascap.com.au ▶ Technical Data ▶ Photometric Files

NOTE: Product specifications are subject to change without notice. Any luminaire can become hot - take care with appropriate use and placement.

⁽¹⁾ Nominal power consumption only, actual power consumed may vary.

WARNING! DO NOT cover downlight - Refer to installation requirements AS 5110

Key

Control System Code

Product requires a particular control system for Single colour or RGB dimming.

TYPE A Installation

RGB system requirements

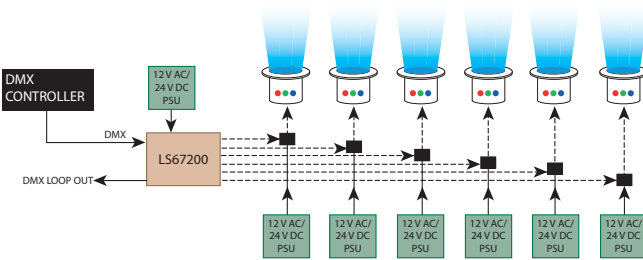

DMX RGB control option 1

- 1 luminaire only
- Luminaire driven by integral LED drivers
- Luminaire powered through LS67100 PWM controller

DMX RGB control option 2

- Up to 6 luminaires addressed and controlled together
- All luminaires powered by integral LED drivers
- Luminaires powered by individual power supplies

DMX RGB control option 3

- Up to 6 luminaires addressed and controlled individually
- All luminaires powered by integral LED drivers
- Luminaires powered by individual power supplies

DALI RGB control option 4

- Up to 50 luminaires addressed and controlled together
- All luminaires powered by integral LED drivers
- Luminaires powered by individual power supplies

TYPE B Installation

Single Colour system requirements

DMX single colour dimming option 1

- Up to 3 individually addressed dimmable channels
- Up to 20 luminaires per dimmable channel
- Luminaires driven by integral LED drivers
- Luminaires powered through LS67100 PWM controller (up to 100 W total)

DMX single colour dimming option 2

- Up to 3 individually addressed dimmable channels
- Up to 20 luminaires per dimmable channel
- Luminaires driven by integral LED drivers
- Luminaires powered by individual power supplies

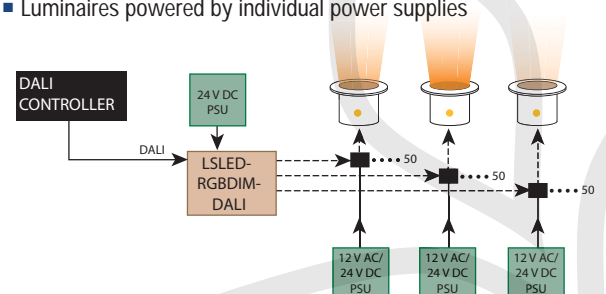

0-10 V single colour dimming option 3

- Stand alone single colour dimming solution
- Up to 50 Luminaires dimmed together
- Luminaires driven by integral LED drivers using LS6122 wall plate dimmer
- Luminaires powered by individual or shared power supplies (refer to page 239 for details)

DALI single colour dimming option 4

- Up to 3 individually addressed dimmable channels
- Up to 50 luminaires per dimmable channel
- Luminaires driven by integral LED drivers
- Luminaires powered by individual power supplies

TYPE C Installation

RGB system requirements

DMX RGB control

- All luminaires driven by remote LED driver
- Up to 5 luminaires
- All luminaires addressed and controlled together

* Refer to table for correct LS6750X variant
 ** Refer to table for maximum luminaire loading for each LS67506 variant

*LS67500 Configurations

LS67501	3 x 350 mA LED channels
LS67502	3 x 500 mA LED channels
LS67503	3 x 700 mA LED channels
LS67504	3 x 1000 mA LED channels
LS67505	350/500/500 mA LED channels
LS67506	350/700/700 mA LED channels
LS67507	700/1000/1000 mA LED channels
LS67508	4 x 350 mA LED channels
LS67509	4 x 500 mA LED channels
LS67510	4 x 700 mA LED channels
LS67511	4 x 1000 mA LED channels

**Maximum Luminaire Loading

Remote Driver Luminares	Number of LEDs/Luminaires	Luminaire Wattage	Remote Driver	Number of Luminaires/Driver
LS563LED-RGB	1 x 3	3 W	LS67501	5
LS393LED-RGB	1 x 3	6 W	LS67506	5
LS793LED-RGB	1 x 3	6 W	LS67506	5
LS275LED-RGB	1 x 3	6 W	LS67506	5
LS731LED-RGB	1 x 3	3 W	LS67501	5
LS431LED-RGB	3 x 6	24 W	LS67507	1
LS411LED-RGB	1 x 9	12 W	LS67505	1
LS333ANS-RGB	1 x 3	6 W	LS67560-2	1

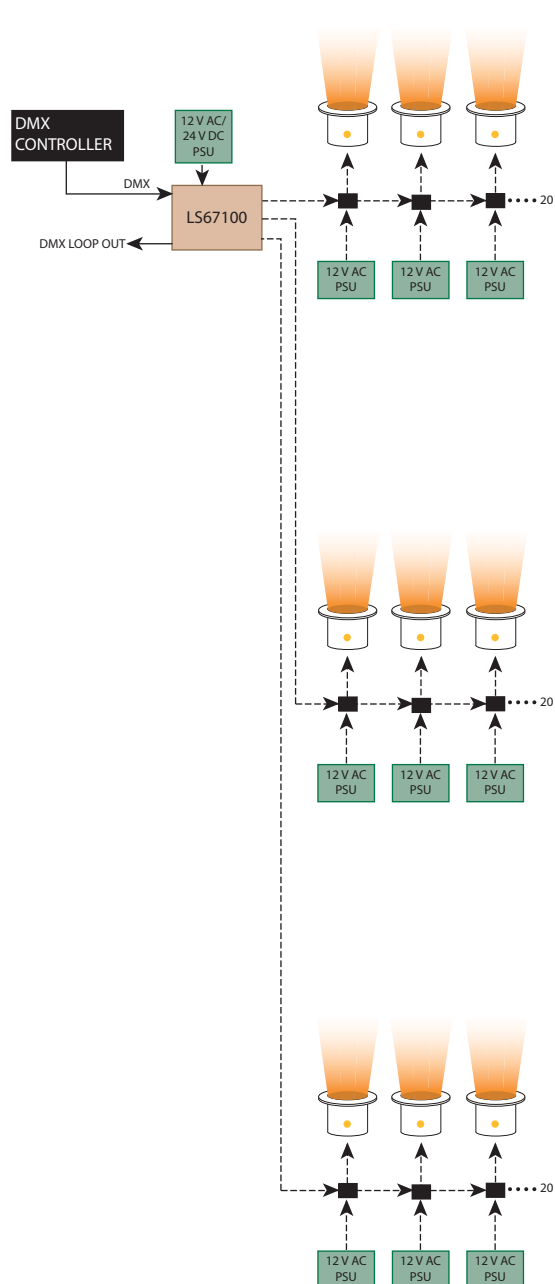

TYPE D Installation

Single Colour system requirements

*Suitable for installation into swimming pools in Australia.
 Each luminaire is powered by its own individual isolated transformer.*

DMX single colour dimming

- Up to 3 individually addressed dimmable channels
- All luminaires powered by integral LED drivers

TYPE E Installation

RGB system requirements

*Suitable for installation into swimming pools in Australia.
Each luminaire is powered by its own individual isolated transformer.*

DMX RGB control option 1

- All luminaires addressed and controlled together
- Each luminaire is powered by an isolated remote LED driver
- Up to 32 x LS67560 master on a DMX network
- Up to 6 x LS67550 slave per LS67560 master
- 1 luminaire per LS67550 or LS67560

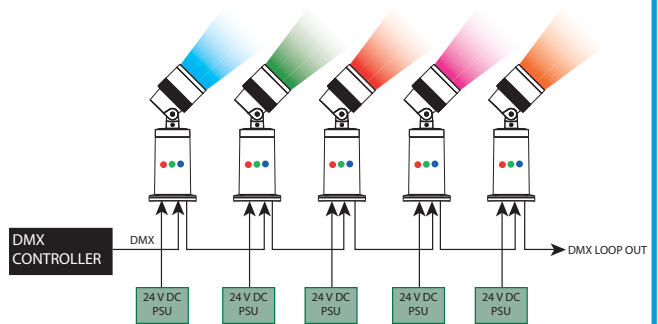

TYPE F Installation

RGB or Single Colour system requirements

DMX RGB control

- All luminaires individually addressable and controllable
- All luminaires powered by integral LED drivers
- Up to 32 luminaires on a DMX network

DMX RGB control option 2

- All luminaires individually addressable and controllable
- Each luminaire is powered by an isolated remote LED driver
- Up to 32 x LS67560 on a DMX network
- 1 luminaire per LS67560

TYPE G Installation

RGB system requirements

DMX RGB control

- All luminaires addressed and controlled together
- Controls up to 10 m of RGB lineo per LSLED-RGBDIM-DMX

Stand alone RGB sequencer

- Speed controlled by 0-10 V or 100 kΩ potentiometer
- All luminaires controlled together
- Controls up to 10 m of RGB lineo per LSLED-RGBDIM-DMX

Stand alone RGB dimming

- Red, green and blue channels dimmed by 0-10 V or 100 kΩ potentiometers
- All luminaires dimmed together
- Controls up to 10 m of RGB lineo per LSLED-RGBDIM

TYPE H Installation

Single Colour system requirements

DMX single colour dimming

- Up to 3 individually addressed dimmable channels
- Dims up to 14 m of single colour lineo per LSLED-RGBDIM-DMX per channel

Stand alone single colour dimming

- Dimmed by 0-10 V or 100 kΩ potentiometer
- All luminaires dimmed together
- Dims up to 14 m of single colour lineo per LSLED-DIM

LINEO CALCULATOR

IMPORTANT NOTE:

To calculate total length of luminaire:

Power per segment for single colour is 2 W and 2.5 W for RGB.

Total length = number of segments x 200 mm + 25 mm.
e.g. 5 x 200 mm + 25 mm = 1025 mm.

To calculate total power requirement:

Each Lineo consists of 200 mm 'segments', each 2 watts.

Total wattage for single colour = number of segments x 2 watts.
e.g. 5 x 2 watts = 10 watts.

Total wattage for RGB = number of segments x 2.5 watts.
e.g. 5 x 2.5 watts = 12.5 watts.

Power supply capacity must be equal to, or larger than this number.

LS22TX/LS50TX/LS100TX

12 V AC remote magnetic transformer

Input Voltage	240 V AC, 50/60 Hz
Output	12 V AC, 50/60 Hz
Ambient Temperature	Max 40 °C
Compliance	EN 1558-1, EN 61558-2-6, ASA, TUV GS, D, N, FI, S, NFSEU, +S, K, EMC, CE, VDE, IP44/67/67
Wattage	22 W, 50 W, 100 W
Protection Class	II

LS200TX/LS300TX/LS400TX/LS500TX

12 V AC remote magnetic transformer

Input Voltage	240 V AC, 50 Hz
Output	12 V AC, 50/60 Hz
Ambient Temperature	Max 50 °C
Compliance	AS61558.2.6, AS61558.1
Open Circuit Protection	Yes
Power Factor	Approx 0.98 when fully loaded with a resistive load
Thermal Protection	Yes – via internal self-resetting thermal cut-out
Wattage	200 W, 300 W, 400 W, 500 W
IP Rating	IP67
Cable	Input: 1.8 m Output: 0.7 m

LSTE4-2/LSTE6-2/LSTE8

12 V AC integral electronic transformer

Input Voltage	220-240 V AC, 50 Hz
Output	12 V AC, 50/60 Hz
Open Circuit Protection	Yes
Thermal Protection	Yes – via internal self-resetting thermal cut-out
Wattage	10-50 W

Transformer Specifications

	Length	Width	Height	Weight
LS22TX	86 mm	55 mm	60 mm	0.80 kg
LS50TX	102 mm	65 mm	75 mm	1.45 kg
LS100TX	140 mm	85 mm	70 mm	2.20 kg
LS200TX	Ø175 mm	-	95 mm	5.05 kg
LS300TX	Ø175 mm	-	95 mm	5.70 kg
LS400TX	Ø198 mm	-	110 mm	7.85 kg
LS500TX	Ø198 mm	-	110 mm	8.55 kg

Power Supplies**LS100DC**

24 V DC ripple free power supply

Input Voltage	170-250 V AC, 50/60 Hz
Output	100 W, 24 V DC, 4.2A
Ambient Operating Temperature	-10°C to 50 °C
Compliance	IEC61347-2-13, CE
IP Rating	IP66
Short Circuit Protection	Yes
Open Circuit Protection	Yes
Protection Class	Class II CE

LS100DC
24 V DC Power Supply

The charts provided may be used to select appropriate power supply / transformer and cable sizes. Please note: 24 V DC ripple free power supplies are far more efficient than 12 V AC transformers. Simply select the luminaire that you intend to use and the quantity required, and then refer to the charts on the following pages. Round the quantity of luminaires up to the nearest quantity displayed in the charts and then use the recommendations from the charts.

At the head of each column is a power supply / transformer and there are sections for each cable size. The charts are intended as a guide and do not cover all possible applications. If the number of luminaires is larger than any displayed on the charts, simply add a second run and power supply.

SPECIFICATIONS

Input Voltage	12 V AC or 12-24 V DC
Output Current Options	350 mA, 700 mA
Wattage	Up to 6 W
Channels	One
Vf of LEDs	Up to 12 V
Efficiency	90% max

FEATURES

- Inbuilt EMI filter
- External dimming controls:
 - PWM control signal
 - Frequency: 100-1000 Hz
 - Current: 2 mA max
 - Invert the dimming cycle by inverting the signal cable inputs.
 - Max signal voltage: 24 V DC
 - 0-10 V Analogue Control Signal:
 - Current Sinking type (Compatible with current sourcing dimmer type)
 - Current: 2 mA max
 - Invert the dimming cycle by inverting the signal cable inputs.
 - Max signal voltage: 24 V DC
- Internal Dimming Controls
 - Dimming by cycling power on/off (refer instruction manual supplied with Lumascope fittings with T5 series drivers).
- Protections
 - Open circuit and short circuit protection
 - Thermal protection for driver (max case temperature 80 °C)
 - Thermal protection for LED array (105 °C on the LED array)
 - Auto restart after cool down -20 °C typically (temperature hysteresis)
- Other Features
 - Configurable to be backwards compatible to Lumascope older generation T4 driver series.
 - Factory re-settable.

Dimensions

DESCRIPTION

The T5 series is a step-down constant current source designed for driving high power LEDs. Standard output currents available are 350 mA and 700 mA to make this driver compatible with a wide range of LED applications.

With so many different low voltage LED components available in the market, it is often a real challenge to piece together luminaires with compatible drivers and controllers, and more challenging again to ensure the system is correctly wired. Using remote drivers often means the LEDs have no protection from incorrect wiring or voltage, short circuit or over temperature conditions. For several years Lumascope has included integral, low voltage drivers in its compact LED luminaires to overcome these issues. The release of the T5 driver series offers a compact, integral driver for low voltage LED luminaires that solves these problems, and now includes some amazing new features.

Lumascope T5 series LED drivers offer exceptional control and protection to the LEDs they power, and form a core part Lumascope LED engineering philosophy. At the heart of this philosophy are the concepts of simplicity and durability: Ease of installation and correct connection and a long and trouble free life of the system is all in keeping with performance expectations of LED systems, yet rarely are these expectations met. The T5 series of LED drivers goes beyond simplicity and durability to also deliver exceptional control and LED protection features that rarely exist.

Being so compact, the T5 drivers fit inside any luminaire. It provides protection to the LEDs by sensing operating temperatures on the LED board and in the driver itself, shutting down the power to the LEDs if a high temperature condition is detected and auto-restarting when it is safe to do so. The T5 driver series also has the ability to dim via analog (0-10 V) and digital signals (PWM). Regardless of the control signal, the LEDs are dimmed on a 14-bit PWM resolution, providing exceptional control and the capability to 'fade to black' with no color shift.

Wiring Diagram

Dimming Signal Wiring Configuration

Dimming Signal Wire Colours	Dimming Signal Source		
	0-10 V signal source controller	Lumascope proprietary PWM controllers	Third party PWM controllers
orange	signal positive	signal positive	signal negative
grey	signal negative	signal negative	signal positive

Note:

The driver cannot be dimmed with internal dim mode if it is being dimmed by an external dimming signal.

To re-enable internal dimming the external signal should first be physically disconnected and then reverted to factory setting.

With external dimming control, to achieve inverted control of the dimming cycle, the signal input connections need to be reversed.

LS6095

Remote constant current driver

Input Voltage	100-240 V AC, 50/60 Hz
Power Factor	PF 0.9 at 100% load
Output	350 mA, 18-36 V DC (7 to 10 individual LEDs)
Ambient Operating Temperature	-30 °C to 70 °C
Compliance	UL1310, Class 2 UL879 recognised CE certified
IP Rating	IP65
Short Circuit Protection	Yes
Open circuit protection	Yes
Protection class	Class II

LS6127

Remote constant current driver

Input Voltage	100-240 V AC, 50/60 Hz
Power Factor	PF 0.9 at 100% load
Output	550 mA, 18-36 V DC (7 to 10 individual LEDs)
Ambient Operating Temperature	-30 °C to 70 °C
Compliance	UL1310, Class 2 UL879 recognised CE certified
IP Rating	IP65
Short Circuit Protection	Yes
Open circuit protection	Yes
Protection class	Class II

LS6097

Remote constant current driver

Input Voltage	100-240 V AC, 50/60 Hz
Power Factor	PF 0.9 at 100% load
Output	1000 mA, 18-36 V DC (1x LS431)
Ambient Operating Temperature	-30 °C to 70 °C
Compliance	UL1310, Class 2 UL879 recognised CE certified
IP Rating	IP65
Short Circuit Protection	Yes
Open Circuit Protection	Yes
Protection Class	Class II

LS6750X

Remote RGB LED driver (Type C installation page 236) for DMX settings page 247

Input Voltage	24 V DC ripple free supply (suggest LS100DC)
Input Control	DMX512
Channels	up to 4
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
Compliance	DMX512 compliant
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)
Protection Class	Class III

Features:

1. Pre-programmed RGB sequence for stand alone operation.
2. Pre-programmed colours for stand alone operation.

LS67550

Remote RGB LED driver (Type E installation page 237) for DMX settings page 247

Input Voltage	240 V AC
Input Control	PWM
Output	Constant current 350 mA for LEDs
Channels	up to 3
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)
Protection Class	Class II

Features:

1. Can be used as a slave unit to the LS67560. (refer to Type E installation option 1)

LS67560-2

Remote RGB LED driver (Type E installation page 237) for DMX settings page 247

Input Voltage	240 V AC
Input Control	DMX512
Output	Constant current 350 mA for LEDs Constant voltage 12 V PWM signal at 200 Hz (can feed up to 6 LS67550 slave units)
Channels	up to 3
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
Compliance	DMX512 compliant
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)
Protection Class	Class II

Features:

1. Pre-programmed RGB sequence for stand alone operation.
2. Pre-programmed colours for stand alone operation.

LS6125 Dimmer System - can dim up to 50 luminaires

(refer to Type B installation option 3 page 235)

Enclosed c/w power supply

Input Voltage	100-240 V AC, 50/60 Hz
Input Signal	0-10 V
Output Signal	PWM

NOTE: 4 wire circuit for luminaires required 2 for supply, 2 for dimming signal.

LS6122 Wall Plate Dimmer

Input Signal	From LS6121 dimmer module
---------------------	---------------------------

NOTE: 2 wire circuit required from LS6121

LS6121 Dimmer Adaptor only - can dim up to 50 luminaires

Input Voltage	12 V DC
Input Signal	0-10 V
Output Signal	PWM

NOTE: 4 wire circuit for luminaires required 2 for supply, 2 for dimming signal. (LS6126 power supply required)

LS6125 Dimmer Adaptor

Note: Internal components of LS6125 Dimmer Adaptor are available individually as:
 LS6121: 0-10 V Dimmer Adaptor
 LS6126: 12 V DC PSU

LS6126 12 V DC Power Supply only

Input Voltage	90-264 V AC
Output Voltage	12 V DC

NOTE: For use with a dimming adaptor only

LSLED-RGBDIM-DMX

(refer to Type G and H installations page 238)

Input Voltage	24 V DC
Input Control	DMX512
Channels	3
Output	24 V DC, 3 x 48 W (144 W RGB)
Ambient Operating Temperature	-20 °C to 50 °C
Compliance	IEC 61347, EN 55015, EN 61547
IP Rating	IP20

Features:

1. Lightweight, low profile.
2. PWM dimming.

LSLED-RGBDIM-DALI

(refer to Type G and H installations page 238)

Input Voltage	12-24 V DC
Input Control	DALI
Channels	3
Output	24 V DC, 75 W
Ambient Operating Temperature	-20 °C to 50 °C
Compliance	0.82
IP Rating	IP65

Features:

1. Lightweight, low profile.
2. PWM dimming.

LSLED-RGBSEQ

(refer to Type G installation page 238)

Input Voltage	24 V DC
Control Voltage	0-10 V DC
Output	24 V DC, 144 W (3 x 48 W)
Ambient Operating Temperature	-20 °C to 50 °C
Short Circuit Protection	Yes – via internal self-resetting thermal cut-out
Open Circuit Protection	Yes
Compliance	IEC 61347-2-2, EN 55015, EN 61547
Thermal Protection	Yes
Channels	3

Features:

1. Lightweight, low profile.
2. PWM dimming.
3. Controlled by 0-10 V or 100 kΩ linear potentiometers.

LSLED-RGBDIM

(refer to Type G installation page 238)

Input Voltage	24 V DC
Control Voltage	0-10 V DC
Output	24 V DC, 144 W (3 x 48 W)
Ambient Operating Temperature	-20 °C to 50 °C
Short Circuit Protection	Yes – via internal self-resetting thermal cut-out
Open Circuit Protection	Yes
Compliance	IEC 61347-2-2, EN 55015, EN 61547
Thermal Protection	Yes – in combination with power supply
Channels	3

Features:

1. Lightweight, low profile.
2. PWM dimming.
3. Controlled by 0-10 V or 100 kΩ linear potentiometers.

LSLED-DIM

(refer to Type H installation page 238)

Input Voltage	24 V DC
Control Voltage	0-10 V DC
Output	24 V DC, 144 W (3 x 48 W)
Ambient Operating Temperature	-20 °C to 50 °C
Short Circuit Protection	Yes – in combination with power supply
Open Circuit Protection	Yes
Compliance	IEC 61347-2-2, EN 55015, EN 61547
Thermal Protection	Yes – via internal self-resetting thermal cut-out
Channels	1

Features:

1. Lightweight, low profile.
2. PWM dimming.
3. Controlled by 0-10 V or 100 kΩ linear potentiometers.

LS67100

4 Channel DMX PWM RGB luminaire controller
(refer to Type A, B installations page 235 and Type D installation page 236)

Input Voltage	24 V DC or 12 V AC, 50/60 Hz
Input Control	DMX 512 (optically isolated)
Output	24 V DC PWM-200 Hz
Channels	4
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
Compliance	DMX 512
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)

Features:

1. Receives DMX512 and converts to PWM for controlling LED luminaires.
2. Optically isolated DMX512 input.
3. Integral optically isolated DMX512 splitter/booster.
4. Five pre-programmed sequences for stand alone operation.
5. Six pre-programmed fixed colours for stand alone operation.

**LS67100**

4 Channel DMX PWM RGB luminaire controller

LS6502

DMX Playback device

Input Voltage	9 V DC
Current Rating	100 mA
Compliance	DMX-512
Number of Shows	12 (requires LS6503 to alternate between shows)
No. of Scenes per Show	65,535

Features:

1. Programming software CD included.
2. LCD display provides status information on current show and fade position.
Requires Windows 95/98/ME/NT/2000/XP.

LS6507 - DMX512/DALI

Luminaire controller and playback device.

(refer to Type C installation page 236)

Input Voltage	12 V DC
Output	DMX512/DALI
Current Rating	245 mA at 21.5 V DC
Wireless Connectivity	Infrared receiver input
Open Circuit Protection	Yes
Compliance	DMX-512, DALI and DSI
Number of Shows	1
LED Indicators	DC input and SCI RS232
Installation	DIN rail mounting

Features:

1. The LS6507 Series 7 standard DIN mount, with removable terminals for easy wiring. RS-232 interface for serial communications between 3rd party systems and the DALI line, 24 V DC input, high capacity DALI power supply.
2. Infrared programming and remote control included.

LS67200

3 Channel DMX PWM RGB luminaire controller
(refer to Type A installation page 235)

Input Voltage	24 V DC or 12 V AC, 50/60 Hz
Input Control	DMX 512 (optically isolated)
Output	24 V DC PWM-200 Hz
Channels	3
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
Compliance	DMX 512
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)

Features:

1. Receives DMX512 and converts to PWM for controlling LED luminaires.
2. Optically isolated DMX512 input.
3. Integral optically isolated DMX512 booster.
4. Five pre-programmed sequences for stand alone operation.
5. Six pre-programmed fixed colours for stand alone operation.
6. Integral six output distribution board.

LS67250

18 Channel DMX PWM RGB luminaire controller
(refer to Type A installation page 235)

Input Voltage	24 V DC or 12 V AC, 50/60 Hz
Input Control	DMX 512 (optically isolated)
Output	24 V DC PWM-200 Hz
Channels	18
Ambient Operating Temperature	-30 °C to 50 °C
Open Circuit Protection	Yes
Compliance	DMX 512
IP Rating	IP65
Number of Luminaires	Refer to installation types in LED Controls Systems Index (page 234)

Features:

1. Receives DMX512 and converts to PWM for controlling LED luminaires.
2. Optically isolated DMX512 input.
3. Integral optically isolated DMX512 booster.
4. Five pre-programmed sequences for stand alone operation.
5. Six pre-programmed fixed colours for stand alone operation.
6. Integral six output distribution board.

**LS67200 / LS67250**

3 or 18 Channel DMX PWM RGB luminaire controller

LS67560 Automatic Sequences

The rotating switches need X100, X10 and X1 need to be configured to get the pre-programmed automatic sequences.

Rotary Switch			Sequence
X100	X10	X1	
7	1	Note 1	1 (rainbow)
7	2	Note 1	2 (blue-cyan oscillate)
7	3	Note 1	3 (yellow wobble)
7	4	Note 1	4 (red white green fade)
7	5	Note 1	5 (rainbow-S) - 18 channels on LS67250

Note 1: please see Sequence Speed Selection table for setting X1

LS67560 DMX Signal Input Setting

Rotary Switch			Operation Type
X100	X10	X1	
0	X	X	DMX
1	X	X	DMX
2	X	X	DMX
3	X	X	DMX
4	X	X	DMX
5	X	X	DMX

LS67560 Sequence Speed Selection

There are 10 speeds for each sequence set by the third switch. The third switch will set the length of time taken to run the whole sequence. For example, the 10 speeds for sequence 1 are as follows:

X1	Speed
0	Pause
1	1 hr
2	30 minutes
3	10 minutes
4	5 minutes
5	2 minutes
6	40 seconds
7	30 seconds
8	20 seconds
9	10 seconds

LS67560 Hard Coded Input Settings

Rotary Switch			Hard Colour
X100	X10	X1	
7	0	0	white
7	0	1	red
7	0	2	green
7	0	3	blue
7	0	4	yellow
7	0	5	cyan
7	0	6	magenta

LS6750X

DMX Addressing and stand alone colours and sequences
(refer to page 243 for specifications)

LS6910

1024 Channel Architectural Wall Plate DMX Show Controller

Voltage	9 V DC, 300 mA
Power Connector	Mini USB / screw terminal
Outputs / Interface	DMX512 / USB
Ethernet Connection	With LS6911
User Interface	Touch panel / PC via USB
Live Control	Colour, dimmer, speed, show
Infra Red Remote Control	With LS6911
Smart Phone Control	With LS6911
iPhone/iPad/Android	
RS232 Triggering	Yes
Ports Triggering	8
Programmability	USB
Windows XP/Vista/Seven	32/64 bit
Easy Stand Alone Pro Software	CD included
DMX Channels	1024 (2 x Universe)
No. of Shows	200
Stand Alone Memory	Mini SD
Calendar Triggering	40 entries
DMX Connection	Screw terminals
Installation	Wall mount indoor
Dimensions	168 x 128 x 11.5 mm

**LS6920**

128 Channel Architectural Stand Alone DMX Show Controller

Voltage	9 V DC, 300 mA
Power Connector	Mini USB
Outputs / Interface	DMX512 / USB
User Interface	Buttons on case
Live Control	Show
Ports Triggering	8
Programmability	USB
Windows XP/Vista/Seven	32/64 Bit
Easy Stand Alone Software	CD included
DMX Channels	128
No. of Shows	20
Stand Alone Memory	5K
DMX Connection	3 pin XLR
Installation	Indoor
Dimensions	79 x 92 x 40 mm

**LS6911**

Communication Module suits LS6910

Outputs / Interface	Ethernet / IR
Ethernet Connection	Yes
User Interface	Touch panel / IR remote control (included) / PC via ethernet / PC via USB
Infra Red Remote Control	Included
Smart Phone Control	Yes
iPhone/iPad/Android	
Programmability	Ethernet
Windows XP/Vista/Seven	32/64 bit
Installation	Plug-in

*Phone not included***LS6930**

3 Channel Architectural Wall Plate DMX/PWM Show Controller

Voltage	12-24 V DC
Power Connector	Screw terminals
Outputs / Interface	DMX512 / PWM
User Interface	Touch panel
Live Control	Colour, dimmer, speed, show, program
Programmability	Touch panel
DMX Channels	3 (repeated across 512 channels)
PWM Channels	3
PWM Current Rating	6 A (3 x 2 A)
No. of Shows	4 moving, 4 static
DMX Connection	Screw terminals
PWM Connection	Screw terminals
Installation	Wall mount indoor
Dimensions	86 x 86 x 15 mm

**LS6940**

128 Channel Architectural Wall Plate DMX Show Controller

Voltage	9 V DC, 300 mA
Power Connector	Mini USB / screw terminal
Outputs / Interface	DMX512 / USB
User Interface	Touch panel / PC via USB
Live Control	Colour, dimmer, show
Ports Triggering	1
Programmability	USB
Windows XP/Vista/Seven	32/64 bit
Easy Stand Alone Software	CD included
DMX Channels	128
No. of Shows	24
Stand Alone Memory	3K
DMX Connection	Screw terminal
Installation	Wall mount indoor
Dimensions	86 x 86 x 11 mm

Note: Not all luminaires can be powered by both AC and DC supply. Refer to specifications for individual luminaire requirements.

The IP system is an internationally recognized method to indicate the degree of protection against the ingress of dust, solid objects and moisture into an enclosure. The letters "IP" are followed by two numerals.

First Numeral

Protection of persons against contact with or approach to live parts and against contact with moving parts (other than smooth rotating shafts and the like) inside the enclosure and protection of the equipment against ingress of solid foreign bodies in accordance with IEC 60598-1:2003.

Numeral	Degree of Protection
0	Not protected.
1	Protected against solid objects 50 mm in diameter or greater. A large surface of the body, such as a hand (no protection against deliberate access).
2	Protected against solid objects 12 mm in diameter or greater. Fingers or similar objects not exceeding 80 mm in length.
3	Protected against solid objects 2.5 mm in diameter or greater. Tools, wires, etc., of diameter or thickness greater than 2.5 mm.
4	Protected against solid objects 1 mm in diameter or greater. Wires or other similar solid material of thickness greater than 1mm in diameter.
5	Dust protected. Dust does not enter in sufficient quantity to interfere with satisfactory operation of equipment.
6	Dust tight. No ingress of dust.

Second Numeral

The second numeral indicates the degree of protection against the ingress of moisture as defined in IEC 60598-1:2003.

Numeral	Degree of Protection
0	Not protected.
1	Protected against dripping water. Dripping water (vertically falling drops) shall have no harmful effect.
2	Protected against dripping water when tilted up to 15°. Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle up to 15° from its normal position.
3	Protected against spraying water. Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect.
4	Protected against splashing water. Water splashing against the enclosure from any direction shall have no harmful effect.
5	Protected against water jets. Water projected by a nozzle against enclosure from any direction shall have no harmful effects.
6	Protected against heavy seas. Water from heavy seas or projected in powerful water jets shall not enter the enclosure in harmful quantities.
7	Protected against the effects of temporary immersion. Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time.
8	Protected against continuous immersion. The equipment is suitable for continuous submersion in water under conditions which shall be specified by the manufacturer.

Impact Protection (IK) Rating

Technical Data

Degree of protection provided by enclosures for electrical equipment against external impacts in accordance with IEC 62262:2002.

IK Code	Degree of Protection
IK00	Not protected.
IK01	Protected against 0.14 joules impact. Equivalent to impact of 0.25 kg mass dropped from 56 mm above impacted surface.
IK02	Protected against 0.2 joules impact. Equivalent to impact of 0.25 kg mass dropped from 80 mm above impacted surface.
IK03	Protected against 0.35 joules impact. Equivalent to impact of 0.25 kg mass dropped from 140 mm above impacted surface.
IK04	Protected against 0.5 joules impact. Equivalent to impact of 0.25 kg mass dropped from 200 mm above impacted surface.
IK05	Protected against 0.7 joules impact. Equivalent to impact of 0.25 kg mass dropped from 280 mm above impacted surface.
IK06	Protected against 1 joules impact. Equivalent to impact of 0.25 kg mass dropped from 400 mm above impacted surface.
IK07	Protected against 2 joules impact. Equivalent to impact of 0.5 kg mass dropped from 400 mm above impacted surface.
IK08	Protected against 5 joules impact. Equivalent to impact of 1.7 kg mass dropped from 300 mm above impacted surface.
IK09	Protected against 10 joules impact. Equivalent to impact of 5 kg mass dropped from 200 mm above impacted surface.
IK10	Protected against 20 joules impact. Equivalent to impact of 5 kg mass dropped from 400 mm above impacted surface.

ALUMINIUM

Lumascape's corrosion resistant, marine grade aluminium luminaires are firstly acid etched to remove surface contaminants and ensure maximum coating adhesion. The etched luminaires then undergo a chromate conversion process to alter the surface structure of the aluminium and provide a keyed surface to further enhance the powder coating adhesion. Most of Lumascape's range of cast aluminium luminaires are given an epoxy undercoat which is a sealing waterproof layer providing high corrosion resistance.

The new premium 'superchrome' powder coat has an additional clear coat to retain the lustre of metallic elements in the superchrome coat.

Lumascape's powder coat is an architectural grade formula, selected specifically for its durability in harsh, coastal environments and carries a two year performance warranty.

Coating Process

1. Marine grade aluminium
2. Acid etched prepared surface
3. Chromate converted surface
4. Powder coat

Standard Powder Coat

-  CB Black
-  CS Anodic Silver
-  CW White

NEW! Premium Powder Coat

-  CA Superchrome

Lumascape is proud to offer a new high gloss chrome powder coat for a lustrous finish on selected luminaires.

316 MARINE GRADE STAINLESS STEEL

Lumascape uses 316 marine grade stainless steel in many of its luminaires because of the excellent corrosion resistance of this grade of stainless steel. However, because many environments around the world are particularly unforgiving on metal components, Lumascape takes corrosion resistance to a new level with its four step ElectropolishPlus™ treatment of the stainless steel City Range, bollards and LED luminaires.

Luminaires undergoing the ElectropolishPlus™ treatment go through four different processes to greatly enhance their corrosion resistance. See page 165 for details.

While 316 stainless steel is highly corrosion resistant in its normal state, if it is not treated to at least one of these processes, it can develop an unsightly coating that resembles rust, called tea staining. Lumascape's ElectropolishPlus™ treatment provides a beautiful stainless steel finish for its products that will remain rust free for the life of the fixture and beyond.

BRASS

Brass is an alloy of copper and zinc, and is a material that is used in the manufacture of several Lumascape luminaires.

Like copper, brass has great thermal performance and is structurally stronger. Lumascape prefers the use of brass over bronze due to its far superior thermal conductivity.

Lumascape luminaires made from brass are also corrosion resistant, making them suitable for use in underwater applications.

Whilst standard die-cast brass is generally used in Lumascape fixtures, some luminaires are offered with the choice of being either shot blasted or polished, giving further textural options to suit different styling.

COPPER

Lumascape uses copper in a number of its outdoor fixtures, particularly in the Landscape Range. Copper has many unique properties that separate it from other materials.

Copper complements the hues found in nature and once weathered adds a distinctive texture to the environment. Furthermore, copper generally has excellent thermal performance and corrosion resistance making copper luminaires ideal for outdoor applications.

Copper and its principal architectural alloys are relatively active metals which, when left unprotected, tend to oxidise. Long term atmospheric exposure in other than arid climates generally results in the formation of the naturally protective grey-green patina.

SUMMARY OF WARRANTY BY PRODUCT CATEGORY

Lumascope will guarantee the following product groups from the date of purchase against faulty workmanship or materials as stated below and subject to the Terms and Conditions following.

Architectural Lighting Luminaires	Structural	Electrical
Spotlights & Floodlights - Aluminium	2 years	12 months
Inground - Stainless Steel	10 years	12 months
Inground - Brass	5 years	12 months
Underwater - Stainless Steel & Brass	5 years	12 months
Wall Mount - Stainless Steel	10 years	12 months
Wall Mount - Aluminium	2 years	12 months
Wall Mount - Brass	5 years	12 months
Bollard & Pathway - Stainless Steel	10 years	12 months
Downlights - Aluminium	2 years	12 months
Landscaped Range Luminaires	Structural	Electrical
Copper	10 years	12 months
Aluminium	2 years	12 months
LEDscape Range Luminaires	Structural	Electrical
Copper	10 years	12 months
Aluminium	5 years	12 months
Stainless Steel	5 years	12 months
Transformers	Structural	Electrical
Magnetic Transformers	12 months	12 months
Electronic Transformers	12 months	12 months

LUMASCOPE PRODUCT WARRANTY TERMS & CONDITIONS

- All warranty claims are subject to manufacturer's review and acceptance.
- Lumascope warrants that it uses reasonable care and skill to ensure that its lighting products are of reasonable quality. Lumascope will at its cost and in its sole discretion:
 - remedy any defect or fault in any product purchased; or
 - replace any product in respect of which there is a defect or fault, during the warranty period, provided that written notice is given by the Purchaser to Lumascope of any such defect or fault in the product as soon as the Purchaser becomes aware of that fault or defect. All warranty claims must be returned to Lumascope for assessment with a receipt or other proof of payment. No warranty is given in respect of any glass contained in any product.
- Lumascope has no liability to remedy any defect in a product or replace a product where the defect or fault is caused or contributed to by
 - the failure of the Purchaser to install the product according to specific installation instructions either supplied within each product box or carton or available on the Lumascope website or through the wholesaler or Lumascope's representative; or
 - use of the product in a manner or for a purpose for which it was not designed.
- All site application or installation must reflect these procedures otherwise the product warranty will be considered void or will not take effect.
- Except as provided for in this warranty, and to the extent allowed by law, Lumascope's liability in respect of the product under the law of any State or Territory is excluded. Where liability may be limited but not excluded by any applicable State or Territory law, liability is limited to the full extent possible under that law.
- This Clause 5 will only apply in Australia to the extent to which the provisions of the Commonwealth Trade Practices Act 1974 (the "Act") apply to contracts entered into by Lumascope for the provision of goods and services. In all other countries the local equivalent Trade Practices legislation shall apply and Lumascope exercises all of its rights to limit its liability to the full extent allowed.

Pursuant to section 68A of the Act, this Clause 6 applies in respect of the goods or services supplied by Lumascope which are not of the kind ordinarily acquired for personal, domestic, or household use or consumption, provided that this Clause 6 will apply if the Purchaser establishes that reliance on it would not be fair and reasonable.

Liability for a breach of a condition or warranty implied by the Act is limited to any one of the following, as determined by Lumascope in its sole discretion:

- the replacement of the goods or the supply of equivalent goods;
- the repair of the goods;
- the payment of the cost of replacing the goods or acquiring equivalent goods; or
- the payment of the cost of having the goods repaired.

In no event will Lumascope be liable to the Purchaser for any damages, including lost profits, lost savings or any other incidental or consequential damages arising out of the use or inability to use the product or any claim by any other party. All claims are limited to the repair or the replacement of the products only and do not include any labour or transportation charges. The entire risk as to the use and performance of the product is assumed by the Purchaser.

- All claims are limited to the repair or the replacement of the products only and do not include any labour or transportation charges. The entire risk as to the use and performance of the product is assumed by the Purchaser..
- Power tools shall not be used to tighten or assemble products. Any damage claim or product failure associated to this matter will be promptly dismissed or rejected.
- All installations shall be performed in accordance with the local, state and country electrical code. Appropriate regulatory authorities should be consulted where required.
- Lumascope products have been factory tested, documented in the catalogue and/or listed by governing safety bodies or public safety agencies to comply with rules and regulations in effect at the time of registration. Product must therefore be used within these parameters and selection must be exercised accordingly by consultants and lighting professionals to extend and preserve public safety during the installation and after.
- All items must be properly grounded and all installations should be performed by a professional electrician and or a duly licensed contractor carrying proper liability insurance.
- All information supplied by Lumascope's representatives shall be reflected in the catalogue or verified with Lumascope directly if it deviates from the primary intended use of a specific product or the product limitations.
- All installation matters and failures related to installation matters will be the installer's responsibility and will remain so throughout the life of the product.
- Lamp wattage and matching replacement parts must be respected throughout the product life.
- There is no warranty offered on lamps other than the lamp manufacturer's warranty if any.
- Lumascope accepts no responsibility for damage to any ancillary equipment or inconvenience caused by the failure of our products.
- Lumascope reserves the right to alter fittings or specifications at any time.
- The use of high pressure water cleaners, corrosive cleaning agents, and harsh abrasives, may damage the function and/or appearance of luminaires. The use of these types of cleaning methods may void warranty.
- High voltage insulation tests (megger) will permanently damage driver electrical components and will void warranty.

The Lumascope Website supersedes this catalogue and all other written or communicated product information. This includes references to packaging, brochure information and other forms of digital or written communication.

All prices subject to change without notification.

Any lighting products suggested by Lumascope for installation are recommendations only regardless of the circumstances of the recommendation. The responsibility for any compliance to required lighting levels or energy standards and codes rests solely with a certified Lighting Engineer or Lighting Practitioner appointed by others.

All Lumascope luminaires are intended for use as architectural accent lighting and their use as part of public or workplace lighting designs requires certification and design by others to ensure compliance to the relevant lighting standards. Under no circumstances does Lumascope accept responsibility for such certification.

About Lumascope

Lumascope Lighting Industries is Australia's leading niche manufacturer of high performance and high quality exterior architectural, landscape and underwater lighting products.

From modest beginnings in 1991, this proudly Australian owned business now exports to more than 40 countries around the world, consistently generating half of its revenue in overseas markets.

Lumascope USA, a wholly-owned subsidiary located in San Carlos, California, services the North American market with locally assembled products sold through more than 50 specialist manufacturers' representatives.

Elsewhere around the world, the company distributes its products through a network of agents and distributors carefully selected for their understanding of the business culture in their particular market and their ability to service the unique needs of customers in those regions.

Our Commitment

We are committed to delivering outstanding value for our customers, maintaining a leadership position in our chosen markets through an ongoing focus on customer needs and expectations. Ongoing training and providing a safe and learning workplace for our employees ensures that Lumascope will maintain its leadership position in the market place.

Our Contribution to the Environment

We take our environmental responsibilities seriously. Lumascope's products and manufacturing processes are designed around the principles of energy efficiency, recyclability and the elimination of waste in all its forms.

We continue to develop an Environmental Management System that ensures the company's current and future products and methods of doing business meet all legislated community requirements and expectations.

Products

All of Lumascope's lighting products are designed, developed and manufactured to suit the specific environmental and regulatory requirements in the countries in which they are sold and installed.

The company is a leader in the development of LED lighting systems and luminaires utilising metal halide lamps, assembled in high ingress protection enclosures.

Innovation

Lumascope invests a significant amount of its revenue each year into the research and development of new and innovative lighting technologies and luminaires. The company has been a recipient of a number of government awards in recent years targeting among other things the development of thermal management techniques vital to the successful performance and durability of LED lighting.

Design Philosophy

Our products are designed around four basic tenets: Anticipation of customer needs, reliability, durability and the application of advanced yet proven technology.

New designs are comprehensively tested and accredited by certified laboratories prior to launch, while all production processes are validated through end-of-line functional testing. In the case of LED luminaires, extended "burn-in" testing is carried out prior to shipment.

Product Engineering at Lumascope

For more than two decades, Lumascope has engineered and manufactured lighting equipment built to withstand the rigors of the outdoor environment. Our commitment to material technology, thermal management and build quality was evident in the first luminaires we built, and today that commitment continues with a special focus on solid state lighting technology.

Solid state is rapidly becoming the source of choice for many lighting applications, and nowhere does it make more sense than in outdoor environments. The long life of LED's drastically extends maintenance cycles, reducing those risks associated with lamp changes, (such as incorrectly resealing a housing or misaligning a lens) and allowing the vision and intent of the designer to remain intact.

Building an LED luminaire to withstand the rigors of a life outside is no easy task. Thermal considerations are paramount, both for the LED and for the drivers powering the LED. Lumascope has a decade's experience working with solid state lighting technology, so as the technology evolved, so too did our approach to thermal management, optics and binning. The result can be seen in our latest generation of LED modules which are pushing past compact HID on output and efficiency.

Lumascope continues to invest heavily in LED luminaire development programs, all of which are backed by the most sophisticated lighting laboratory in the southern hemisphere. Sophisticated developmental and testing capabilities including environmental (temperature, humidity and corrosion), electrical, EMC (electromagnetic compliance), photometric and colorimetric, are housed in our purpose-built laboratory. These capabilities allow our engineers to simulate the harshest environmental conditions to ensure that all product delivered performs flawlessly. Our engineers also have the capability to test luminaires to all of the various ANSI/UL and CSA product standards. All luminaires carry the approvals of a third-party testing body.

Lumascope LED's are sourced only from the most reputable suppliers capable of providing LM-80 test data on lumen depreciation. Lumascope is committed to providing detailed performance specifications on our products, which is why you will start to see L70 lumen maintenance performance data published in our literature. In addition to this, LM79 test reports are being prepared for our major luminaire categories.

Specify Lumascope with confidence knowing that each Lumascope luminaire has been designed, tested and built to perform in the harshest of environments.

Q What are LEDs?

A A Light Emitting Diode (LED) is a semiconductor device that emits narrow spectrum light when electrically biased in the forward direction. The colour of the emitted light depends on the chemical composition of the semiconducting material used.

Q What are the benefits of using LEDs as a light source?

A The main benefits of using LED light sources are:

- Long life / low maintenance
- Durability (no glass or filaments)
- Energy savings
- Directed light for increased system efficiency
- Lower operating temperature
- Design flexibility (ie. LED colour, shape, mounting)
- Colour variability
- Vivid saturated colour without externally fitted filters
- Environmentally friendly (minimised waste, no mercury, lead-free)
- No heat or UV in the light beam
- Very cold starting temperature - as low as -40°C

Q What is the difference between single colour LEDs and RGB LEDs?

A An RGB LED consists of multiples of three LEDs (red, green and blue). A multitude of different colours can be created by mixing various intensities of these three basic colours. Single colour LEDs are available in many different colours however the colour is fixed and cannot be changed.

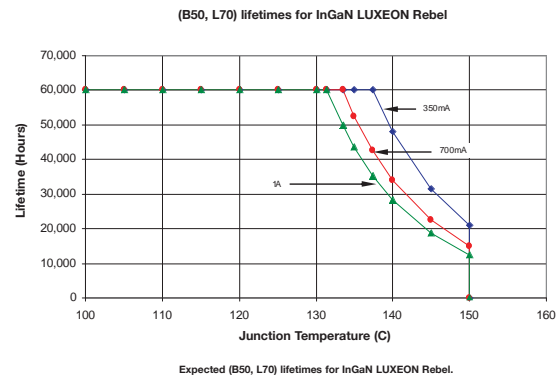

Q What is the real life of LEDs and why is there such variation claimed (50,000 to 100,000 hours)?

A Every LED experiences a gradual and permanent reduction in light output during operation. PHILIPS Lumileds classify a failed LED as one whose lumen output has reduced to 70% of the initial output. It should be noted that the human eye is insensitive to small changes in illuminance levels and that a decrease in output of approximately 50% is needed in order to create noticeable change. (Source: PHILIPS Lumileds, Application Brief AB45).

All Lumascape luminaires are designed to keep the junction temperature well below maximum rated values in normal operating conditions, even at elevated ambient temperatures. To achieve optimum life, LED luminaires should not be operated in direct sunlight, therefore it is recommended a PE cell be included in any exterior LED luminaire installation.

Q What is the relationship between the temperature at which the LED runs and its life span?

A Running an LED above the manufacturer's recommended junction temperature will result in an accelerated reduction in light output. Since the long life of LEDs is a key benefit, it is essential for the temperature of the LED junction to be managed correctly. This graph indicates how the LED junction temperature and life are related.

**Q How consistent are particular colours of individual LEDs?**

A During the manufacturing process LEDs are binned (sorted) according to colour, forward voltage and luminous flux. Lumascape uses binned LEDs to minimise variability. This is especially important for large projects where consistency is important. Lumascape records the bins of LEDs supplied to individual customers allowing the re-supply of LEDs to match previous installations.

Q Should LEDs be operated using an AC transformer or a DC power supply?

A Many Lumascape luminaires can be operated using either 12 V AC magnetic transformers or 24 V DC ripple free power supplies. Lumascape also has an extensive range of LED luminaires suitable for line voltage. High frequency electronic transformers cannot be used.

Q Which transformer should I use and how many luminaires can I run off a single transformer or power supply?

A See page 240 for transformer capacities.

Q Are LED luminaires to be wired in series or in parallel?

A All Lumascape LED luminaires with integral LED drivers must be connected in parallel (the same as conventional luminaires). All Lumascape LED luminaires with remote LED drivers must be connected in series.

Q Are LEDs dimmable? Can a basic residential dimmer be used?

A Some low voltage drivers have a dimming feature. An additional pair of wires for the dimming signal is required on the luminaire. This is not available as standard. Please specify this requirement at the time of ordering. A basic residential dimmer cannot be used. Refer to page 242 for the field intensity setting with Lumascape low voltage LED drivers.

Q Do I need a constant current driver and why?

A Lumascape offers several options for powering each luminaire: built-in low voltage drivers, built-in line voltage drivers or remote LED drivers (customer can use a constant current driver of their choice). Please refer to each product page for that product's available options.
